About This Guide

XML browser simply means that the SIP phones’ LCD screen display can be managed by external applications.

This guide shows you how to use XML API to control the LCD screen display of Yealink IP phones as well as its configuration. The XML API is intended to provide you with flexibility in developing applications on the phones while tightly integrating into the phone’s telephony capabilities and functions.

This guide applies to the following Yealink IP phones:

- SIP-T54S, SIP-T52S, SIP-T48S, SIP-T46S, SIP-T42S, SIP-T41S, SIP-T40G, SIP-T27G IP and CP920 phones running firmware version 81 or later

Who should use this guide?

This guide is designed specifically to provide development engineers, system administrators, or network engineers with information for developing and deploying customized client services to Yealink IP phones using the XML browser feature.

This guide is not intended for end users and does not provide user-level information on how to use any specific XML applications.

Before reading this guide, you should be familiar with the following:

- Basic text editors, or full IDE-like Eclipse or Microsoft Visual Studio for creating or writing code.
- General application and software development.
- Adequate planning, creating, and testing resources needed to produce a fully deployable web-based application.
- Yealink IP phones and provisioning methods.
- How to use an XML editor.
- The XML-based schema and syntax.
Summary of Changes

This section describes the changes to this guide for each release and guide version.

Changes for Release 82, Guide Version 82.73

Documentations of the newly released SIP-T58V/A and SIP-T56A IP phones have been added.

Changes for Release 82, Guide Version 82.72

Documentations of the newly released CP920 HD IP conference phones have been added.

Changes for Release 81, Guide Version 81.71

Documentations of the newly released SIP-T54S and SIP-T52S IP phones have been added.

Changes for Release 81, Guide Version 81.70

Documentations of the newly released SIP-T40G IP phones have been added.

Changes for Release 81, Guide Version 81.20

None

Changes for Release 81, Guide Version 81.15

Documentations of the newly released SIP-T48S, SIP-T46S, SIP-T42S, SIP-T41S and SIP-T27G IP phones have been added.

Major updates have occurred to the following sections:

- InputScreen Object on page 26
- Yealink IP Phone XML Configurations on page 98

Changes for Release 80, Guide Version 80.81

Documentations of the newly released CP860 and SIP VP-T49G IP phones have been added.

Changes for Release 80, Guide Version 80.80

Documentations of the newly released SIP-T40P IP phones have been added.
Major updates have occurred to the following section:

- **Execute Object** on page 55

### Changes for Release 80, Guide Version 80.60

Documentations of the newly released SIP-T19(P) E2 IP phones have been added.

The following section is new:

- **Configuring the Default Input Method** on page 111

Major updates have occurred to the following sections:

- **XML display control and keys on Yealink IP phones** on page 5
- **Yealink IP Phone XML Objects** on page 9
- **TextMenu Object** on page 10

### Changes for Release 80, Guide Version 80.20

This version is updated to remove SIP-T28P, SIP-T26P, SIP-T22(P), SIP-T21(P), SIP-T20(P) and SIP-T19(P) IP phones. Documentations of the newly released SIP-T27P and SIP-T21(P) E2 IP phones have also been added.

Major updates have occurred to the following sections:

- **XML display control and keys on Yealink IP phones** on page 5
- **Yealink IP Phone XML Objects** on page 9
- **Configuring an XML Browser Key** on page 98

### Changes for Release 80, Guide Version 80.6

Documentations of the newly released SIP-T29G IP phones have also been added. Major updates have occurred to the following sections:

- **XML display control and keys on Yealink IP phones** on page 5
- **Yealink IP Phone XML Objects** on page 9
- **Customizable Soft keys** on page 84
- **Configuring an XML Browser Key** on page 98

### Changes for Release 80, Guide Version 80.5

Documentations of the newly released SIP-T23P/G IP phones have also been added. Major updates have occurred to the following sections:

- **XML display control and keys on Yealink IP phones** on page 5
XML Browser Developer's Guide for Yealink IP Phones

- Yealink IP Phone XML Objects on page 9
- Customizable Soft keys on page 84
- Configuring an XML Browser Key on page 98

Changes for Release 72, Guide Version 72.60

Major updates have occurred to the following section:
- Yealink IP Phone XML Objects on page 9

Changes for Release 72, Guide Version 72.30

The following sections are new:
- XML Format on page 2
- Some Development Guidelines on page 89
- Troubleshooting on page 114
- Appendix on page 116

Major updates have occurred to the following section:
- Yealink IP Phone XML Objects on page 9

Changes for Release 72, Guide Version 72.2

This version is updated to incorporate SIP-T48G IP phones. Major updates have occurred to the following section:
- Yealink IP Phone XML Objects on page 9

Changes for Release 72, Guide Version 72.1

This version is updated to incorporate SIP-T46G, SIP-T42G and SIP-T41P IP phones. Major updates have occurred to the following section:
- Yealink IP Phone XML Objects on page 9

Changes for Release 71, Guide Version 71.165

Major updates have occurred to the following section:
- Yealink IP Phone XML Objects on page 9
Changes for Release 71, Guide Version 71.140

Major updates have occurred to the following sections:

- XML display control and keys on Yealink IP phones on page 5
- Yealink IP Phone XML Objects on page 9
- Customizable Soft keys on page 84
- XML Objects Pushed to the Phone on page 87

Changes for Release 71, Guide Version 71.111

Documentations of the newly released SIP-T19(P) and SIP-T21(P) IP phones have also been added.

Changes for Release 71, Guide Version 71.110

The following sections are new:

- Configuring the Push XML Server on page 92
- Configuring the Block XML in Calling on page 105

Major updates have occurred to the following section:

- Yealink IP Phone XML Objects on page 9
XML stands for extensible Markup Language. It is a markup language much like HTML. HTML is designed to display data and to focus on how data looks, while XML is designed to describe data and to focus on what data is.

XML enables SIP phones to serve as output devices for many exciting applications. The XML infrastructure allows the phones to interact with external applications in a flexible and programmable manner.

The following are characteristics of XML:

- XML tags are not predefined. You must define your own tags.
- XML uses an XML schema to describe the data.
- XML with an XML schema is designed to be self-descriptive.
- XML is a W3C Standard Recommendation.

Sample of Basic XML document:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneTextMenu
    destroyOnExit="no"
    style="numbered"
    Beep="no"
    Timeout="30"
    LockIn="no">
    <Title wrap="yes">Phone Services</Title>
    <MenuItem>
        <Prompt>Ask Google</Prompt>
        <URI>http://10.2.11.158/yealink/google/google.php?user=</URI>
        <Dial>456</Dial>
    </MenuItem>
    <MenuItem>
        <Prompt>CNN News</Prompt>
        <Dial>1001</Dial>
    </MenuItem>
</YealinkIPPhoneTextMenu>
```
XML Format

XML is written in the form of XML elements consisting of tags enclosed in angle brackets (e.g., `<YealinkIPPhoneTextMenu>`). XML contains 3 kinds of tags: the start tag, the end tag and the empty-element tag. The empty-element tag has two kinds of form: in pairs (e.g., `<MenuItem>` `<MenuItem>` ) and not in pairs (e.g., `<MenuItem />`). With the exception of the empty-element tag not in pairs, XML tags most commonly come in pairs like `<YealinkIPPhoneTextMenu>` and `/YealinkIPPhoneTextMenu>`. The first tag in a pair is the start tag (e.g., `<YealinkIPPhoneTextMenu>` ), and the second tag is the end tag (e.g., `</YealinkIPPhoneTextMenu>` ). XML mainly follows rules as below:

- XML must have root element.
- The end tag must have the character “/”.
- XML tags are case-sensitive.
- Each attribute value should be within double quotations.
- The texts within `<!-- -->` are considered as comments.

XML provides escape facilities for including characters which are problematic to include directly. For example, the characters “<” and “&” are key syntax markers and may never appear in content. XML has five predefined entities.

XML conversion table is shown as below:

<table>
<thead>
<tr>
<th>Character</th>
<th>Name</th>
<th>Escape Sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>&amp;</td>
<td>Ampersand</td>
<td>&amp;</td>
</tr>
<tr>
<td>‘</td>
<td>Quote</td>
<td>&quot;</td>
</tr>
<tr>
<td>'</td>
<td>Apostrophe</td>
<td>'</td>
</tr>
<tr>
<td>&lt;</td>
<td>Left angle bracket</td>
<td>&lt;</td>
</tr>
<tr>
<td>&gt;</td>
<td>Right angle bracket</td>
<td>&gt;</td>
</tr>
</tbody>
</table>

To respect XML recommendations, the following header can be set at the beginning of the XML document,

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
```

Or

```xml
<?xml version="1.0" encoding="UTF-8"?>
```

Yealink provides XML object files beginning with the XML declaration `"<?xml version="1.0" encoding="ISO-8859-1"?>"`.

For more information on XML, refer to [http://www.xml.com/](http://www.xml.com/).
Functionality

The XML browser feature on Yealink IP phones allows users to develop and deploy custom services which meet user functional requirements on the server. Users can customize practical applications, such as weather report, stock information, Google search, news service, etc.

Phone service developers should take it into consideration that the phone is not a web browser so it cannot parse HTML. Although the content is delivered to the phone through HTTP messages using a web server, keep in mind that the content is not HTML. All content comes to the IP phone either as plain text or text packaged in XML objects.

Yealink IP phones support 10 proprietary XML objects, which allow the creation of powerful XML applications.

There are 2 types of XML objects:

UI objects: XML objects are used to control the LCD screen display of IP phones.

Non UI objects: XML objects have no direct impact on the current LCD screen display of IP phones.

The supported objects are:

- TextMenu object (UI)
- TextScreen object (UI)
- InputScreen object (UI)
- Directory object (UI)
- ImageScreen object (UI)
- ImageMenu object (UI)
- FormattedTextScreen object (UI)
- Status object (UI)
- Execute object (Non UI)
- Configuration object (Non UI)
How does it work?

Depending on the IP infrastructure, Yealink has supported developing the XML browser capability of the phones using HTTP. Yealink IP phones support two modes for XML browser applications:

- **Phone-initiated**
- **Server-initiated**

### Phone initiated application

You can press the predefined XML Browser key to trigger the phone initiated application of XML browser. After you press the key, the IP phone issues an HTTP(s) GET request message to the server, waits for the answer, decodes and displays this response message like any web browser, such as Microsoft Internet Explorer or Firefox, and would do as a web client. For more information on how to configure an XML Browser key, refer to Configuring an XML Browser Key.

![Figure 1 Yealink IP phone acting as a client](image)

### Server initiated application

The server initiated application would be more frequently used on the network. In this mode, end users do not need to do any configuration and operation.

The server can push an XML object to the phone via an HTTP POST. For more information, refer to XML Objects Pushed to the Phone.
In addition, Yealink IP phones support accepting SIP NOTIFY messages from a SIP proxy server, and act as limited web servers. For more information on how to configure the XML SIP Notify, refer to Configuring the XML SIP Notify.

![Figure 2 Yealink IP phone acting as a server (HTTP(s) post)](image)

![Figure 3 Yealink IP phone acting as a server (SIP NOTIFY)](image)

**XML display control and keys on Yealink IP phones**

This chapter describes the available part of the LCD screen for each phone model of Yealink IP phones as well as the keys that are controlled by the XML objects.

The LCD screen and keys available for XML applications on a Yealink SIP-T58V/T58A/T56A IP phone are:

- 14 text lines and 1 soft key line for the LCD screen
The soft key line is a command line and will be used to display the labels of the available actions.

The LCD screen and keys available for XML applications on a Yealink SIP VP-T49G IP phone are:

- 16 text lines and 1 soft key line for the LCD screen

The soft key line is a command line and will be used to display the labels of the available actions.

The LCD screen and keys available for XML applications on a Yealink SIP-T48G/S IP phone are:

- 15 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can also be
interpreted as a “cancel” key, and the OK key as a “confirm” key.

The LCD screen and keys available for XML applications on a Yealink SIP-T52S IP phone are:

- 11 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can also be interpreted as a “cancel” key, and the OK key as a “confirm” key.

The LCD screen and keys available for XML applications on a Yealink SIP-T46G/T46S/T29G IP phone are:

- 10 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can also be interpreted as a “cancel” key, and the OK key as a “confirm” key.

The LCD screen and keys available for XML applications on a Yealink SIP-T54S IP phone are:

- 9 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can also be interpreted as a “cancel” key, and the OK key as a “confirm” key.
The LCD screen and keys available for XML applications on a Yealink SIP-T42G/T42S/T41P/T41S IP phone are:

- 5 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can also be interpreted as a “cancel” key, and the OK key as a “confirm” key.

The LCD screen and keys available for XML applications on a Yealink SIP-T27P/G IP phone are:

- 7 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can also be interpreted as a “cancel” key, and the OK key as a “confirm” key.

The LCD screen and keys available for XML applications on a Yealink SIP-T40P/T40G/T23P/T23G/T21(P) E2/T19(P) E2 IP phone are:

- 4 text lines and 1 soft key line for the LCD screen
- The left and right arrow navigation keys
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the X key can be interpreted as a “cancel” key, and the OK key as a “confirm” key for SIP-T23P/T23G/T21(P) E2 IP phones; the key can be as a “confirm” key for SIP-T19(P) E2 IP phones.

The LCD screen and keys available for XML applications on a Yealink CP860/CP920 IP phone are:

- 5 text lines and 1 soft key line for the LCD screen
- The up and down arrow navigation keys

The soft key line is a command line and will be used to display the labels of the available actions. Depending on the XML object displayed on the phone, the OK key as a “confirm” key.
Yealink IP Phone XML Objects

Creating interactive service applications is relatively easy when you understand the XML objects that are defined for Yealink IP phones and the behavior that each XML object generates.

Regardless of what causes the phone to load an XML page, the phone always behaves appropriately after it loads a page. Appropriate behavior depends only on the type of data delivered in the page.

This chapter details all the XML objects supported by Yealink IP phones.

In this chapter:

Yealink IP phones with soft keys are:

- Yealink SIP-T54S IP phones
- Yealink SIP-T52S IP phones
- Yealink SIP-T46G/S IP phones
- Yealink SIP-T42G/S IP phones
- Yealink SIP-T41P/S IP phones
- Yealink SIP-T40P/G IP phones
- Yealink SIP-T29G IP phones
- Yealink SIP-T27P/G IP phones
- Yealink SIP-T23P/G IP phones
- Yealink SIP-T21(P) E2 IP phones
- Yealink SIP-T19(P) E2 IP phones
- Yealink CP860 IP phones
- Yealink CP920 HD IP conference phone

Yealink IP phones with a color graphical touch screen are:

- Yealink SIP-T58V/A IP phones
- Yealink SIP-T56A IP phones
- Yealink SIP VP-T49G IP phones
- Yealink SIP-T48G/S IP phones
XML Object Definitions

This section details each proprietary XML object supported by Yealink IP phones. You can ask the distributor or Yealink FAE for XML object files or obtain XML object files online: http://support.yealink.com/documentFront/forwardToDocumentFrontDisplayPage.

Note

The size of an XML object cannot exceed 10000 bytes (10 kb).

Per XML specifications, only one XML object is supported in an XML document sent to the phone.

XML objects do not support Chinese characters.

TextMenu Object

The TextMenu object allows users to create a list of menu items on the IP phones. You can use the TextMenu object to customize some functions such as weather report, stock information, new services, etc. You can browse the menu items by linking HTTP requests.

XML description of the TextMenu object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneTextMenu
   destroyOnExit="yes/no"
   defaultIndex = "integer"
   style = "numbered/none"
   Beep = "yes/no"
   wrapList="yes/no"
   Timeout = "integer"
   cancelAction = "URI"
   LockIn = "yes/no"
>
   <Title wrap = "yes/no">Menu Title</Title>
   <MenuItem>
      <Prompt>First menu item</Prompt>
      <URI>HTTP(s) URL</URI>
      <Dial>Number for dial</Dial>
      <Selection>Selection</Selection>
   </MenuItem>

   <!--Additional menu items may be added (up to 30) -->

   <!--Additional soft key items may be added -->
</YealinkIPPhoneTextMenu>
```
The parameters of the TextMenu object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Position</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>YealinkIPPhoneTextMenu</td>
<td>Root tag</td>
<td>mandatory</td>
<td>none</td>
<td>The root element of the TextMenu object.</td>
</tr>
<tr>
<td>destroyOnExit</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot;</td>
<td>Select &quot;yes&quot; to return to the previous XML object after exit. Select &quot;no&quot; to return to the previous screen, and keep in the same XML object after exit. Default value is &quot;no&quot;.</td>
</tr>
<tr>
<td>defaultIndex</td>
<td>Root tag</td>
<td>optional</td>
<td>Integer</td>
<td>Position of the cursor. If the value is not specified or exceeds the number of menu items, the cursor will be positioned on the first menu item. Default value is 1.</td>
</tr>
<tr>
<td>style</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;numbered&quot;</td>
<td>numbered (default): Add a digit before each menu item for index.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;none&quot;</td>
<td>none: No sign before each menu item.</td>
</tr>
<tr>
<td>Beep</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot;</td>
<td>Whether to play a tone when the XML object is opened. Default value is &quot;yes&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;no&quot;</td>
<td></td>
</tr>
<tr>
<td>wrapList</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot;</td>
<td>Whether to display the title of the menu item specified by the Prompt parameter in multi-lines when the content of the title is more than one line. Select &quot;yes&quot; to display the title in multi-lines, and &quot;no&quot; for one line. Default value is &quot;yes&quot;. (only for SIP VP-T49G/SIP-T58V/T58A/T58G)</td>
</tr>
<tr>
<td>Parameter</td>
<td>Position</td>
<td>Type</td>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>----------</td>
<td>-------</td>
<td>----------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Timeout</td>
<td>Root tag</td>
<td>optional</td>
<td>integer</td>
<td>It needs to add a space to indicate a new line.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>56A/T54S/T52S/T48G/T48S/T46G/T46S/T29G IP phones</td>
<td>If there is no operation at a fixed interval (in seconds) on the phone, the phone will automatically exit from the TextMenu screen. If it is set to 0, the phone will not automatically exit from the TextMenu screen until pressing the “Exit” soft key, ‘X’ key or off-hook key, or tapping 📞/✓. Default value is 45. Note: Pressing the “X” key is not applicable to SIP VP-T49G/SIP-T58V/T58A/T56A/T19(P) E2/CP860/CP920 IP phones. Pressing the off-hook key is only applicable to CP860/CP920 IP phones. Tapping 📞 is only applicable to SIP VP-T49G/SIP-T48G/T48S IP phones. Tapping ✓ is only applicable to SIP-T58V/T58A/T56A IP phones. Note: If “cancelAction” is not left blank, the function of “X” key is calling the URI defined by “cancelAction”. If “cancelAction” is left blank, the function of “X” key is returning to the idle screen.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Position</td>
<td>Type</td>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>----------</td>
<td>--------</td>
<td>-------</td>
<td>-------------</td>
</tr>
<tr>
<td>cancelAction</td>
<td>Root tag</td>
<td>optional</td>
<td>URI</td>
<td>Define the URI to be called when the user cancels the XML object.</td>
</tr>
<tr>
<td>LockIn</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot; &quot;no&quot;</td>
<td>If it is set to “yes”, the phone ignores specified function key events. Default value is “no”. For more information, refer to the function keys and soft keys table shown next.</td>
</tr>
<tr>
<td>Title</td>
<td>Body</td>
<td>mandatory</td>
<td>string</td>
<td>The title of the text menu.</td>
</tr>
<tr>
<td>wrap</td>
<td>Title tag</td>
<td>optional</td>
<td>&quot;yes&quot; &quot;no&quot;</td>
<td>Whether to display the title of the menu in multi-lines when the content of the title is more than one line (up to 3 lines for SIP-T27G/T27P/CP920 IP phones; up to 2 lines for CP860/SIP-T58V/T58A/T56A/T42G/T42S/T41P/T41S/T40P/T40G/T23P/T23G/T21(P) E2/T19(P) E2 IP phones; not limit for SIP VP-T49G/SIP-TS4S/T52S/T48G/T48S/T46G/T46S/T29G with space in title). Select “yes” to display in multi-lines, and “no” for one line. Default value is &quot;yes&quot;.</td>
</tr>

### Key Name | Operation | Function
---|---|---

| | | If the value of the LockIn is "yes" and there is a number contained in the Dial tag:  
For off hook and pressing the line key, the phone will dial out the number.  
For pressing Speakerphone key, the phone will be no response to any operation.  
If the value of the LockIn is "yes" and there is no number contained in the Dial tag, the phone will be no response to any operation.  
**Note:** Pressing the line key is not applicable to SIP-T19(P) E2/CP860/CP920 IP phones.  
Pressing the off-hook key is only applicable to CP860/CP920 IP phones. Off hook is not applicable to CP860/CP920 IP phones. |
| | | If "cancelAction" is not left blank, the function of "X" key is calling the URL defined by "cancelAction".  
If "cancelAction" is left blank, the function of "X" key is returning to the idle screen.  
**Note:** Pressing the "X" key is not applicable to SIP VP-T49G/SIP-T58V/T58A/T56A/T19(P) E2/CP860/CP920 IP phones. |
| | | The function of "OK/√" key is the same as that of "Select".  
**Note:** Pressing the "OK/√" key is not applicable to SIP VP-T49G/SIP-T58V/T58A/T56A IP phones. |

An example of the TextMenu object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneTextMenu
  style="numbered"
  Beep="no"
  Timeout="30"
  LockIn="no">
  <Title wrap="yes">Phone Services</Title>
  <MenuItem>
    <Prompt>Ask Google</Prompt>
  </MenuItem>
</YealinkIPPhoneTextMenu>
```
In the example, with the first menu item selected and taking SIP-T23G IP phone for reference:

- Picking up handset, the phone will dial "456" using the first available account.
- Pressing the Speakerphone key, the phone will dial "456" using the first available account.
- Pressing the first line key, the phone will dial "456" using the corresponding account.
- Pressing the Select soft key or OK key, the phone will call http://10.2.11.158/yealink/google/google.php?user= &selection=12345.

![InputScreen Object](image)

**InputScreen Object**

The InputScreen object allows users to create a screen capable of gathering user input. It constructs and displays an input form, which prompts the users to input content, then sends the input content to the target URL. You can use InputScreen object for user login or saving some information to server. You can define the content and format of the input content.

XML description of the InputScreen object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneInputScreen
    destroyOnExit="yes/no"
    type = "IP/string/number/timeUS/timeInt/dateUS/dateInt"
    Beep = "yes/no"
    Password = "yes/no"
    Timeout = "integer"
    LockIn = "yes/no"
    inputLanguage = "English"
    cancelAction= "URL"
    displayMode = "normal/condensed"
    defaultIndex = "integer">
    <Title wrap = "yes/no">Title string</Title>
    <URL>Target receiving the input</URL>
    <InputField
        type = "IP/string/number/timeUS/timeInt/dateUS/dateInt/empty"
        password = "yes/no"
        editable = "yes/no">
        <Prompt>Guidance for the input</Prompt>
        <URL>Target receiving the input</URL>
    </InputField>
</YealinkIPPhoneInputScreen>
```
The parameters of the InputScreen object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Position</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>

</tr>
</tbody>
</table>

An example of the InputScreen object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneInputScreen
type="string"/>
```
In this example, when the user presses the **Submit** soft key or OK/√ key on the phone after entering “admin” for the User Name and “222” for the password, the phone will call the following URLs:

- **http://10.3.5.5/?proxy=admin&proxy=222&selection=1**, if the position of the cursor is located in the User Name input box.
- **http://10.3.5.5/?proxy=admin&proxy=222&selection=2**, if the position of the cursor is located in the Password input box.

The screenshot of the SIP-T23G IP phone user interface for reference is shown as below:
The screenshot of the SIP-T58V IP phone user interface for reference is shown as below:

![SIP-T58V](image1)

The screenshot of the SIP VP-T49G IP phone user interface for reference is shown as below:

![SIP-VP-T49G](image2)

The screenshot of the SIP-T48G IP phone user interface for reference is shown as below:

![SIP-T48G](image3)
The screenshot of the SIP-T46G IP phone user interface for reference is shown as below:

You can press the **More** soft key to find more soft keys.

**Directory Object**

The Directory object allows users to browse an online directory in real time. The Directory object is just like a remote phonebook. It displays an automatically numbered list of contacts. After selecting a contact with the cursor, the contact can be dialed directly by pressing the **Send** soft key, picking up the handset or pressing the line/Speakerphone/off-hook key.

XML description of the Directory object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneDirectory
    destroyOnExit="yes/no"
    defaultIndex = "integer"
    next = "URI"
    previous = "URI"
    Beep = "yes/no"
    cancelAction="URI"
    Timeout = "integer"
    LockIn = "yes/no">
    <Title wrap = "yes/no">Directory Title</Title>
    <MenuItem>
        <Prompt>Contact Name</Prompt>
        <URI>number</URI>
    </MenuItem>
    <!--Additional Menu Items may be added -->
    <!--Additional soft key items may be added -->
</YealinkIPPhoneDirectory>
```
The parameters of the Directory object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>

</tr>
</tbody>
</table>
### Key Name | Operation | Function
--- | --- | ---
OK/√ Key | Pressing the “OK/√” key | The function of “OK/√” key is the same as that of “Send”. **Note:** Pressing the “OK/√” key is not applicable to SIP VP-T49G/SIP-T58V/T58A/T56A IP phones.

An example of the Directory object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneDirectory

defaultIndex="1"
    next="http://10.3.5.198/ImageMenu.xml"
    previous="http://10.3.5.198/ImageScreen.xml"
    cancelAction="http://10.3.5.198/TextScreen.xml"
    Timeout="15"
    LockIn="no">
    <Title>My Directory</Title>
    <MenuItem>
        <Prompt>Joy</Prompt>
        <URI>10.2.11.163</URI>
    </MenuItem>
    <MenuItem>
        <Prompt>John Doe</Prompt>
        <URI>1003</URI>
    </MenuItem>
</YealinkIPPhoneDirectory>
```

In the example, with the first item selected and taking SIP-T23G IP phone for reference:

- Picking up handset, the phone will dial “10.2.11.163”.
- Pressing the Speakerphone key, the phone will dial “10.2.11.163”.
- Pressing the line key, the phone will dial “10.2.11.163”.
- Pressing the **Previous** soft key, the phone will call [http://10.3.5.198/ImageScreen.xml](http://10.3.5.198/ImageScreen.xml).
- Pressing the **Next** soft key, the phone will call [http://10.3.5.198/ImageMenu.xml](http://10.3.5.198/ImageMenu.xml).
- Pressing the X key, the phone will call [http://10.3.5.198/TextScreen.xml](http://10.3.5.198/TextScreen.xml).

**Status Object**

The Status object allows users to display a status message on a single designated line on the phone’s idle screen when XML information is pushed from the servers. The Status object can remind users of received messages, missed calls, news, notify, etc.

XML description of the Status object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>

<YealinkIPPhoneStatus
    Beep = "yes/no"
    SessionID="String"
    Timeout = "timeout"
>
    <Message
        Account = "user@server URI"
        Icon="icon index"
    />
</YealinkIPPhoneStatus>
```
The parameters of the Status object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Position</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>YealinkIPPhoneStatus</td>
<td>Root tag</td>
<td>mandatory</td>
<td>none</td>
<td>The root element of the Status object.</td>
</tr>
<tr>
<td>Beep</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot; &quot;no&quot;</td>
<td>Whether to play a tone when the XML object is opened. Default value is &quot;yes&quot;.</td>
</tr>
<tr>
<td>SessionID</td>
<td>Root tag</td>
<td>optional</td>
<td>string</td>
<td>Session ID is used to mark different Status Objects. It allows message change and message reset. For more information, refer to remove status messages from the display using the same Session ID. <strong>Note</strong>: The Session ID must be unique to the application sending the XML object to the phone.</td>
</tr>
<tr>
<td>Timeout</td>
<td>Root tag</td>
<td>optional</td>
<td>integer</td>
<td>The time for status information display. The phone will automatically exit from the status screen at a fixed interval (in seconds) on the phone. Default value is 30. If it is set to 0, the phone will not exit from the status screen until the server sends a cancel request or the phone reboots.</td>
</tr>
<tr>
<td>Parameter</td>
<td>Position</td>
<td>Type</td>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>----------</td>
<td>------------</td>
<td>-------</td>
<td>-------------</td>
</tr>
<tr>
<td>Message</td>
<td>Body</td>
<td>optional</td>
<td>string</td>
<td>Message to be displayed or empty to reset the message. (Up to 9 instances for SIP-T58V/T58A/T56A with small font size. Up to 10 instances for SIP VP-T49G/SIP-T48G/T48S with small font size. Up to 5 instances for SIP-T54S, SIP-T52S, SIP-T46G, SIP-T46S and SIP-T29G with small font size. Only 1 instance for other phone models)</td>
</tr>
<tr>
<td>Account</td>
<td>Message tag</td>
<td>optional</td>
<td>string</td>
<td>Specify the registered account for the status. (To display the message, this account must be registered on the phone.)</td>
</tr>
<tr>
<td>Icon</td>
<td>Message tag</td>
<td>optional</td>
<td>Forward DND Message</td>
<td>Icon used to index status message.</td>
</tr>
<tr>
<td>Size</td>
<td>Message tag</td>
<td>optional</td>
<td>&quot;normal&quot; &quot;small&quot; &quot;double&quot; &quot;large&quot;</td>
<td>Font size of the text. &quot;small&quot;: 12 pt &quot;normal&quot;: 18 pt &quot;double&quot;: 24 pt &quot;large&quot;: 28 pt Default value is &quot;normal&quot;. For CP860/CP920/SIP-T42G/T42S/T41P/T41S/T40P/T40G/T27P/T27G/T23P/T23G/T21(P) E2/T19(P) E2: This parameter will be ignored.</td>
</tr>
<tr>
<td>Align</td>
<td>Message tag</td>
<td>optional</td>
<td>&quot;center&quot; &quot;left&quot; &quot;right&quot;</td>
<td>Alignment of the message display. Default value is &quot;left&quot;.</td>
</tr>
</tbody>
</table>
### Table of Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Position</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color</td>
<td>Message tag</td>
<td>optional</td>
<td>“white” “black” “red” “green” “brown” “blue” “magenta” “cyan” “lightgray” “darkgray” “lightred” “lightgreen” “yellow” “lightblue” “lightmagenta” “lightcyan”</td>
<td>Color of the line. For CP860/CP920/SIP-T42G/T42S/T41P/T41S/T40P/T40G/T27P/T27G/T23P/T23G/T21(P) E2/T19(P) E2: This parameter will be ignored and the text displayed is always black. For SIP VP-T49G/SIP-T58V/T58A/T56A/T48G/T48S/T46G/T46S/T29G: Default value is “white”.</td>
</tr>
</tbody>
</table>

An example of the Status object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneStatus
    Beep="yes"
    SessionID="125"
    Timeout="600">
    <Message Size="large" Align="left" Color="red" Account="" Icon="Forward">Forward to 321</Message>
    <Message Size="normal" Align="center" Color="black" Account="" Icon="DND">DND is enabled</Message>
    <Message Size="small" Align="right" Color="green" Account="" Icon="Message">1 New Message</Message>
</YealinkIPPhoneStatus>
```
The screenshot of the SIP-T23G IP phone user interface for reference is shown as below:

![SIP-T23G IP phone user interface](image)

The screenshot of the SIP-T58V IP phone user interface for reference is shown as below:

![SIP-T58V IP phone user interface](image)

The screenshot of the SIP VP-T49G IP phone user interface for reference is shown as below:

![SIP VP-T49G IP phone user interface](image)
The screenshot of the SIP-T48G IP phone user interface for reference is shown as below:

![SIP-T48G User Interface](image1)

The screenshot of the SIP-T46G IP phone user interface for reference is shown as below:

![SIP-T46G User Interface](image2)

The status messages will be erased when the phone is restarted.

You can also remove status messages from the display using the same Session ID. This can be accomplished by setting an empty tag for the Message tag. For example, here is the XML object to remove the message in the first line.

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneStatus
  Beep="yes"
  SessionID="125"
  Timeout="600">
  <Message/>
  <Message Size="normal" Align="center" Color="black" Account="" Icon="DND">DND is enabled</Message>
  <Message Size="small" Align="right" Color="green" Account="" Icon="Message">1 New Message</Message>
</YealinkIPPhoneStatus>
```
Execute Object

The Execute object allows an external application to ask the phone to execute a sequence of local commands using URIs. The phone will execute each specified command in order.

XML description of the Execute object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneExecute>
  Beep = "yes/no">
  <ExecuteItem URI = "URI"/>
  <!--Additional Execute Items may be added (up to 30)--> 
</YealinkIPPhoneExecute>
```

The parameters of the Execute object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Position</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>YealinkIPPhoneExecute</td>
<td>Root tag</td>
<td>mandatory</td>
<td>none</td>
<td>The root element of the Execute object.</td>
</tr>
<tr>
<td>Beep</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot; &quot;no&quot;</td>
<td>Whether to play a tone when beginning to execute the commands. Default value is &quot;yes&quot;.</td>
</tr>
<tr>
<td>ExecuteItem URI</td>
<td>ExecuteItem tag</td>
<td>mandatory</td>
<td>URI</td>
<td>The operation of command item, such as call user, data download from server according to the URL, etc. Valid values are listed in the following tables.</td>
</tr>
</tbody>
</table>

An example of the Execute object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneExecute Beep="yes">
  <ExecuteItem URI="Key: OFF_HOOK "/>
</YealinkIPPhoneExecute>
```

The IP phone enters the phone status screen.
### Configuration Object

The Configuration object allows an external application to modify configuration of the IP phones dynamically. The configuration parameters are ones that are used in configuration files (Common.cfg and MAC.cfg) detailed in *Yealink_SIP-T2 Series T19(P) E2_T4_Series_T5_Series_W5_Series_IP_PPhones_Auto_Provisioning_Guide_V81*.

XML description of the Configuration object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneConfiguration
    Beep = "yes/no">
    <Item>parameter= value</Item>
    <!-- Additional Configuration Items may be added (up to 1300) -->
</YealinkIPPhoneConfiguration>
```

The parameters of the Configuration object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Position</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>YealinkIPPhone</td>
<td>Root tag</td>
<td>mandatory</td>
<td>none</td>
<td>The root element of the Configuration object.</td>
</tr>
<tr>
<td>oneConfiguration</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Beep</td>
<td>Root tag</td>
<td>optional</td>
<td>&quot;yes&quot;</td>
<td>Whether to play a tone when applying the configuration. Default value is &quot;yes&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;no&quot;</td>
<td></td>
</tr>
<tr>
<td>Item</td>
<td>Body</td>
<td>mandatory</td>
<td>none</td>
<td>Configuration item.</td>
</tr>
</tbody>
</table>

An example of the Configuration object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneConfiguration
    Beep="yes">
    <Item>account.1.enable = 1</Item>
    <Item>account.1.label = 7002</Item>
    <Item>account.1.display_name = 7002</Item>
    <Item>account.1.user_name = 7002</Item>
    <Item>account.1.auth_name = 7002</Item>
    <Item>account.1.sip_server.1.address = 10.2.1.199</Item>
</YealinkIPPhoneConfiguration>
```

The IP phone registers account 7002 on line 1.
FormattedTextScreen Object

The FormattedTextScreen object allows IP phones to display formatted (alignment, size, color and scrolling) texts on the LCD screen.

This text is divided into the following 3 distinct blocks, any of which can be empty:

- The Header block is displayed at the top of the LCD screen and contains static text. For SIP VP-T49G/SIP-T54S/T52S/T48G/T48S/T46G/T46S/T29G IP phones, this block can display 2-line texts at most. For SIP-T58V/T58A/T56A IP phones, this block can display 1-line text at most. Not limit for other phone models.
- The Scroll block is displayed under the Header block. How many lines of text can be displayed on this block depends on the size of the LCD screen.
- The Footer block is displayed at the bottom of the LCD screen with static text. This block can display one line only.

XML description of the FormattedTextScreen object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneFormattedTextScreen
    destroyOnExit="yes/no"
    doneAction = "URI"
    Beep = "yes/no"
    Timeout = "integer"
    LockIn = "yes/no"/>
  <Line
    Size="normal/small/double/large"
    Align="center/left/right"
    Color="white/black/red/green/brown/blue/magenta/cyan/lightgray/darkgray/lightred/lightgreen/yellow/lightblue/lightmagenta/lightcyan"
    >Header Line</Line>
  <!-- Additional Line may be added -->
  <Scroll>
    <Line
      Size="normal/small/double/large"
      Align="center/left/right"
      Color="white/black/red/green/brown/blue/magenta/cyan/lightgray/darkgray/lightred/lightgreen/yellow/lightblue/lightmagenta/lightcyan"
      >Scroll Line</Line>
    <!-- Additional Line may be added -->
  </Scroll>
</YealinkIPPhoneFormattedTextScreen>
```
The parameters of the FormattedTextScreen object are listed in the following table:

<table>

</tbody>
</table>

An example of the FormattedTextScreen object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneFormattedTextScreen
doneAction="http://10.1.0.105/menu.php"
Beep="yes"
Timeout="60"
Lockln="no">
    <Line Size="large" Align="center">Header line1</Line>
    <Scroll>
        <Line Size="large" Align="center">Scroll line1</Line>
        <Line Align="left" Color="black">Scroll line2</Line>
        <Line Size="small" Align="right" Color="white">Scroll line3</Line>
    </Scroll>
    <Line Size="small" Align="right" Color="white">Footer line1</Line>
</YealinkIPPhoneFormattedTextScreen>
```

In this example, when you press the **OK/√** key, the phone will call http://10.1.0.105/menu.php.

The screenshot of the SIP-T46G IP phone user interface for reference is shown as below:

**ImageScreen Object**

The ImageScreen object allows users to display simple image on the IP phones. The user can specify where the image should be placed by setting horizontal and vertical alignment of the upper left hand corner, along with the height and width of the image.

**Note**

For SIP-T42G/S, SIP-T41P/S, SIP-T40P/G, SIP-T27P/G, SIP-T23P/G, SIP-T21(P) E2, SIP-T19(P) E2, CP920 and CP860 IP phones, the image is a "dob" file, which is specified as a series of hexadecimal characters. For more information on converting a "dob" file to hexadecimal string, refer to Customizing an Image File on page 116.

For SIP-T58V/A, SIP-T56A, SIP-T54S, SIP-T52S, SIP-T29G, SIP-T46G/S, SIP-T48G/S and SIP VP-T49G IP phones, the image is a "jpg", "bmp", "jpeg" or "png" file located on a server, which can be downloaded by the phone.
XML description of the ImageScreen object:

```
<YealinkIPPhoneImageScreen
    destroyOnExit="yes/no"
    doneAction = "URI"
    Beep = "yes/no"
    Timeout = "integer"
    LockIn = "yes/no"
    mode="regular/fullscreen">

    <Image
        horizontalAlign="right/middle/left"
        verticalAlign="top/middle/bottom"
        height="integer"
        width="integer"
        >Image as hexadecimal characters or URL</Image>

</YealinkIPPhoneImageScreen>
```

The parameters of the ImageScreen object are listed in the following table:

The screenshot of the SIP-T46G IP phone user interface for reference is shown as below:

![Image Menu Object](image)

**ImageMenu Object**

The ImageMenu object allows users to create an image list of menu items on the IP phones. The user can specify the image menu items to link HTTP requests.

**Note**

For SIP-T42G/S, SIP-T41P/S, SIP-T40P/G, SIP-T27P/G, T23P/G, SIP-T21(P) E2, SIP-T19(P) E2, CP920 and CP860, the image is a “dob” file, which is specified as hexadecimal string. For more information on converting a “dob” file to hexadecimal string, refer to Customizing a Image File on page 116.

For SIP-T29G, SIP-T46G/S, SIP-T48G/S, SIP VP-T49G IP phones, the image is a “jpg”, “bmp” or “png” file located on a server, which can be downloaded by the phone.

For SIP-T58V/A, SIP-T56A, SIP-T54S and SIP-T52S IP phones, the image is a “jpg”, “bmp”, “jpeg” or “png” file located on a server, which can be downloaded by the phone.

XML description of the ImageMenu object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneImageMenu
     destroyOnExit="yes/no"
     doneAction = "URI"
     Beep = "yes/no"
     Timeout = "integer"
     LockIn = "yes/no"
     mode="regular/fullscreen"
>
```
The parameters of the ImageMenu object are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>

        width="59">
        000000000000000000000000000000...50ff08b2fd2db301780000...
    </Image>
</YealinkIPPhoneImageMenu>
</?xml_version="1.0" encoding="ISO-8859-1">
```

In this example, you can do the followings:

- Press the pound key to enter the TextMenu screen.
- Press the digit key 0 to enter the Directory screen.
- Press the digit key 1 to enter the InputScreen screen.
- Press the **OK/√** key, the phone will call `http://10.1.0.105/menu.php`. If you use the SIP-T19(P) E2 IP phone, you should press **OK/√** key.

In this example, you can do the followings:

- Press the pound key to enter the TextMenu screen.
- Press the digit 0 to enter the Directory screen.
- Press the digit 1 to enter the InputScreen screen.
- Press the OK/√ key, the phone will call http://10.1.0.105/menu.php.

The screenshot of the SIP-T48G IP phone user interface for reference is shown as below:
The screenshot of the SIP-T46G IP phone user interface for reference is shown as below:

![SIP-T46G IP phone user interface](image)

**Customizable Soft keys**

Yealink IP phones allow users to create soft keys with customizable labels, positions and actions to be taken when the soft keys are pressed. The customizable soft keys can override the default soft keys in each XML object.

XML descriptions of customizable soft keys:

```xml
<SoftKey index = "1-6">
    <Label>Text</Label>
    <URI>http://someserver/somepage/SoftKey:action/Key:action</URI>
</SoftKey>
```

**Note**

Customizable soft keys are only available for the UI XML objects.

If you use the customizable soft keys, the default soft keys of the XML object will not be displayed anymore. This means they have to be recreated as customizable soft keys.

The URI of the custom soft key is case sensitive.

For more information on available values of “Key:action”, refer to *Execute Object* on page 55.

The parameters of the soft key are listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SoftKey</td>
<td>mandatory</td>
<td>none</td>
<td>The soft key.</td>
</tr>
<tr>
<td>Index</td>
<td>mandatory</td>
<td>Integer</td>
<td>Indicate the soft key number. (Value ranges from 1~6.)</td>
</tr>
<tr>
<td>Label</td>
<td>mandatory</td>
<td>String</td>
<td>The label of the soft key.</td>
</tr>
<tr>
<td>URI</td>
<td>mandatory</td>
<td>String</td>
<td>The action of the soft key.</td>
</tr>
</tbody>
</table>
The supported actions for each UI XML object are described in the following table:

<table>
<thead>
<tr>
<th>Label</th>

</tbody>
</table>
An example of the customizable soft keys used with the TextMenu object:

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneTextMenu
  style="none"
  Beep="no"
  Timeout="30"
  LockIn="no">
  <Title wrap="yes">Phone Services</Title>
  <MenuItem>
    <Prompt>Ask Google</Prompt>
    <URI>http://10.2.11.158/yealink/google/google.php?user=</URI>
    <Dial>456</Dial>
  </MenuItem>
  <MenuItem>
    <Prompt>CNN News</Prompt>
    <Dial>1001</Dial>
  </MenuItem>
  <SoftKey index="1">
    <Label>Select</Label>
    <URI>SoftKey:Submit</URI>
  </SoftKey>
  <SoftKey index="2">
    <Label>Custom</Label>
    <URI>http://10.1.0.105/8.8.8.54.rom</URI>
  </SoftKey>
</YealinkIPPhoneTextMenu>
```
XML Objects Pushed to the Phone

The phone can request an XML object via HTTP GET, or an object can be pushed to the phone via a POST. The phone parses this object immediately upon receipt and displays the information on the screen. You can ask the distributor or Yealink FAE for php source code or obtain php source code online:

The HTTP POST packet must contain an “xml=” line in the message body. XML data is located after the equals sign in the message. HTML forms that post objects to the phone must use a field named “xml” to send data. The applications that construct HTTP packets must also specify this line.

To accept a pushed message, the “PushXML_ServerIP” parameter on the phone must be configured as the IP address of the push XML server. For more information, refer to Configuring the Push XML Server Address.

Description of the object oriented php class (the red contents are needed to modify):

```php
<?php
#

function push2phone($server,$phone,$data)
{
    $xml = "xml=".$data;
    $post = "POST / HTTP/1.1\n";
    $post .= "Host: $phone\n";
    $post .= "Referer: $server\n";
    $post .= "Connection: Keep-Alive\n";
    $post .= "Content-Type: text/xml\n";
    $post .= "Content-Length: ".strlen($xml)."\n\n";
    $fp = @fsockopen ($phone, 80, $errno, $errstr, 5);
    if($fp)
    {
        fputs($fp, $post.$xml);
    }
```
flush();
fclose($fp);
}

#############################
# The above codes are fixed, please just edit the following codes according to requirement.

$xml = "the beginning of the root element in the XML object\n";
$xml . = "the child elements in the XML object\n";
$xml . = "the end of the root element in the XML object\n ";
<!---Additional XML Items may be added -->
<!--All XML Items added here construct an XML object -->

push2phone("Server IP Address, Phone IP Address ",$xml);
# replace IP address of the push XML server with "Server IP Address"
# replace IP address of the phone with "Phone IP Address"
?>

Sample php source code:

In this example, the IP address of the push XML server is 192.168.0.112, and the server is defined to send a XML message to the IP phone with IP address 192.168.0.150.

```php
<?php
#
function push2phone($server,$phone,$data)
{
$xml = "xml=",".$data;
$post = "POST / HTTP/1.1\n";
$post .= "Host: $phone\n";
$post .= "Referer: $server\n";
$post .= "Connection: Keep-Alive\n";
$post .= "Content-Type: text/xml\n";
$post .= "Content-Length: ".strlen($xml)."\n";
$fp = @fsockopen ( $phone, 80, $errno, $errstr, 5);
if($fp)
{
    fputs($fp, $post.$xml);
flush();
```
Some Development Guidelines

There are some simple rules that you had better follow when you develop XML applications for Yealink IP phones.

- Do not forget the "Exit" soft key when you customize soft keys.
- Place custom soft keys as they are for the standard objects, also it is better to use the same labels.
- If you want to access data from the internet, it is preferable to use a RSS feed or a SOAP interface than Web scraping as Web sites frequently change their layout interface.
Configuring the HTTP Server

Yealink IP phones support downloading by using the HTTP (HTTPS) protocol. You can set up the HTTP(s) server, and place some XML files on the server for downloading.

This section provides you with some instructions on how to configure the HTTP server and obtain the access URL of the XML files downloaded by the IP phones.

To configure the HTTP server using HFS application:

1. Double click the HFS.exe.
2. Click Menu in the main page and select the IP address of the PC from IP address. The default HTTP port is 80. You can also reset the HTTP port (make sure the port isn’t in use before reset).
3. Right click the icon on the left of the main page, select Add folder from disk to add the HTTP Server root directory.
4. Locate the root directory from your local computer. Select your desired folder.
5. Select one of the XML files, then the access URL of the selected XML file displays in the address bar.

The screenshot for reference is shown as below:
Configuring the Push XML Server

XAMPP is a free, cross-platform, easy-to-use web server capable of serving dynamic pages. XAMPP consists mainly of the Apache HTTP Server, MySQL database and interpreters for scripts written in the PHP and Perl programming languages. XAMPP is an acronym for X (any of the four operating systems Windows, Linux, Sun Solaris and Mac OS X), Apache, MySQL, PHP and Perl.

This section shows you how to install XAMPP on Microsoft Windows system. The XAMPP software is available for free. You can download it from http://www.apachefriends.org/index.html. We recommend that you configure the XAMPP as the push XML server, and then follow the instructions to push an XML object to the phone.

To install the XAMPP:

1. Double click xampp-win32-1.8.3-3-VC11-installer.exe to run the application.
2. Follow the setup wizard shown as below:
   - Remember the installation path of the XAMPP. In this example, the installation path is C:\xampp.
Configure the Push XML Server

Select Components

Select the components you want to install. Click Next when you are ready to continue.

- Server
- Apache
- MySQL
- FileZilla FTP Server
- Mercury Mail Server
- Tomcat
- PHP
- Perl
- Windows
- phpMyadmin
- Webalizer
- Fake Sendmail

Installation folder

Please choose a folder to install XAMPP.

Select a folder: C:\Xampp
3. Click Finish to finish the installation.

To start the XAMPP:

1. Double click xampp-control.exe in the installation path of the XAMPP.
2. Click Start next to the Apache module.
Apache is running as shown below:

You can also click **Stop** to stop Apache.

**Note**
Ensure ports 80 and 443 are not being used when starting the Apache server.

**To test the installation of the XAMPP:**

1. Enter "http://localhost/xampp/" in the address bar of the web browser and press the **Enter** key.

The web page should be shown as below:

**To push an XML object to the phone:**

After the XAMPP server is installed in your local system and Apache is already started, you can find the htdocs directory in the installation path (For example, C:\xampp) of the XAMPP.

1. Place the php file used to send an XML object to the phone (For example, TextScreen.php) in the htdocs directory.

2. Enter the access URL (For example, http://localhost/TextScreen.php) Replace "TextScreen.php" with the name of the XML object to be pushed.) of the php file in the address bar of the web browser, and press the **Enter** key to push an XML object to the
phone.
Yealink IP Phone XML Configurations

The followings take configurations of a SIP-T23G IP phone running firmware version 81 as examples.

Configuring an XML Browser Key

To use the XML browser feature, you must configure an XML key in advance. You can configure an XML Browser key via web user interface, phone user interface or configuration files.

To configure an XML Browser key via web user interface:
1. Access the web user interface of the phone.
2. Click on Dsskey -> Line Key (or Programmable Key).
3. In the desired DSS key field, select XML Browser from the pull-down list of Type.
4. Enter the available access URL in the Value field.
5. (Optional.) Enter the string that will appear on the LCD screen in the Label field.
6. Click Confirm to accept the change.

To configure an XML Browser key via phone user interface:
1. Press Menu -> Features -> DSS Keys.
2. Select the desired DSS Key.
3. Press or , or the Switch soft key to select XML Browser from the Type field.
4. (Optional.) Enter the string that will appear on the LCD screen in the Label field.
5. Enter the available access URL in the **Value** field.
6. Press the **Save** soft key to accept the change.

**To configure an XML Browser key using configuration files:**

1. Add/Edit XML Browser key parameters in the configuration file (e.g., y000000000044.cfg).

The following table shows the information of parameters:

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Permitted Values</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>linekey.X.type/programablekey.X.type/expansion_module.X.key.Y.type</td>
<td>27</td>
<td>Refer to the following content</td>
</tr>
</tbody>
</table>

**Description:**

Configures a DSS key X as an XML Browser key on the IP phone.

The digit **27** stands for the key type **XML Browser**.

For line keys:

- X ranges from 1 to 29 (for SIP VP-T49G/SIP-T48G/T48S)
- X ranges from 1 to 27 (for SIP-T58V/T58A/T56A/T54S/T46G/T46S/T29G)
- X ranges from 1 to 15 (for SIP-T42G/T42S/T41P/T41S)
- X ranges from 1 to 21 (for SIP-T52S/T27P/T27G)
- X ranges from 1 to 3 (for SIP-T40P/T40G/T23P/T23G)
- X ranges from 1 to 2 (for SIP-T21(P) E2)

For programable keys:

- X=12-14 (for SIP-T58V/T58A/T56A)
- X=1-4, 12-14 (for SIP VP-T49G)
- X=1-10, 12-14 (for SIP-T54S/T48G/T48S/T46G/T46S)
- X=1-10, 13 (for SIP-T52S/T42G/T42S/T41P/T41S)
- X=1-14 (for SIP-T29G/T27P/T27G)
- X=1-10, 14 (for SIP-T23P/T23G/T21(P) E2)
- X=1-9, 13, 14 (for SIP-T19(P) E2)
- X=1-6, 9, 13 (for CP860/CP920)

For ext keys:

**For SIP-T54S/T52S:**

- X ranges from 1 to 3, Y ranges from 1 to 60.

**For SIP-T48G/T48S/T46G/T46S:**

- X ranges from 1 to 6, Y ranges from 1 to 40.

**For SIP-T29G/T27P/T27G:**

- X ranges from 1 to 6, Y ranges from 1 to 20, 22 to 40 (Ext key 21 cannot be
### Parameters

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Permitted Values</th>
<th>Default</th>
</tr>
</thead>
</table>

- **configured**.

**Example:**

```
linekey.1.type = 27
```

**Default:**

For line keys:

**For SIP VP-T49G/SIP-T48G/T48S IP phones:**

The default value of the line key 1-16 is 15, and the default value of the line key 17-29 is 0.

**For SIP-T58V/T58A/T56A/T54S/T46G/T46S/T29G IP phones:**

The default value of the line key 1-16 is 15, and the default value of the line key 17-27 is 0.

**For SIP-T52S IP phones:**

The default value of the line key 1-12 is 15, and the default value of the line key 13-21 is 0.

**For SIP-T42G/S IP phones:**

The default value of the line key 1-12 is 15, and the default value of the line key 13-15 is 0.

**For SIP-T41P/S IP phones:**

The default value of the line key 1-6 is 15, and the default value of the line key 7-15 is 0.

**For SIP-T27P/G IP phones:**

The default value of the line key 1-6 is 15, and the default value of the line key 7-21 is 0.

**For SIP-T40P/T40G/T23P/T23G/T21(P) E2 IP phones:**

The default value is 15.

For programable keys:

**For SIP-T58V/T58A/T56A IP phones:**

- When X=12, the default value is 0 (NA).
- When X=13, the default value is 0 (NA).
- When X=14, the default value is 2 (Forward).

**For SIP VP-T49G IP phones:**

- When X=1, the default value is 28 (History).
- When X=2, the default value is 61 (Directory).
- When X=3, the default value is 5 (DND).
- When X=4, the default value is 30 (Menu).
- When X=12, the default value is 0 (NA).
<table>

</table>
| X ranges from 1 to 6, Y ranges from 1 to 40.  
For SIP-T29G/T27P/T27G:  
X ranges from 1 to 6, Y ranges from 1 to 20, 22 to 40 (Ext key 21 cannot be configured).  
Example:  
linekey.1.label = XML Browser  
**Web User Interface:**  
Dsskey->Line Key/Programable Key->label  
**Phone User Interface:**  
Menu->Features->DSS Keys->Line Key X->label  
**linekey.X.shortlabel**  
(X ranges from 1 to 21)  
String within 99 characters  
Blank  
**Description:**  
(Optional.) Configures the short label displayed on the LCD screen for line key.  
**Note:** It is only applicable to SIP-T52S IP phones.  
**Web User Interface:**  
Dsskey->Line Key->Short  
**Phone User Interface:**  
Menu->Features->DSS Keys->Line Key X->Short Label  
---

The following shows an example of configuring an XML Browser key in the configuration file:

1. **linekey.1.type = 27**  
2. **linekey.1.value = http://10.2.1.158/TextMenu.xml**  
3. **linekey.1.label = XML Browser**  

2. Reference the configuration file in the boot file (e.g., y000000000000.boot).

   **Example:**
   
   ```
   include:config "http://10.2.1.158/HTTP Directory/y000000000044.cfg"
   ```

3. Upload the boot file and configuration file to the root directory of the provisioning server.
4. Trigger IP phones to perform an auto provisioning for configuration update.

The boot file is only applicable to IP phones running firmware version 81 or later. For more information on auto provisioning, refer to [Yealink SIP IP Phones Auto Provisioning Guide V81](#).

## Configuring the Block XML in Calling

You can configure the Block XML in Calling via web user interface. It enables or disables the
phone to block XML applications during a call. For example, if it is enabled, press a XML browser key when there is an active call on the phone, the XML application will be blocked.

**To configure the Block XML in Calling via web user interface:**

1. Access the web user interface of the phone.
2. Click on **Features** -> **Remote Control**.
3. Select the desired value from the pull-down list of **Block XML in Calling** field.
4. Click **Confirm** to accept the change.

**To configure the Block XML in Calling using configuration files:**

1. Add/Edit **Block XML in Calling** parameters in the configuration file (e.g., `y000000000044.cfg`).

The following table shows the information of parameters:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Permitted Values</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>push_xml.block_in_calling</code></td>
<td>0 or 1</td>
<td>0</td>
</tr>
</tbody>
</table>

**Description:**
Enables or disables the phone to block XML applications during a call.

- **0** - Disabled
- **1** - Enabled

**Web User Interface:**
Features -> Remote Control -> Block XML in Calling

**Phone User Interface:**
None

The following shows an example of configuring Block XML in Calling in the configuration file:

`push_xml.block_in_calling = 1`
2. Upload the configuration file to the root directory of the provisioning server.
3. Reference the configuration file in the boot file (e.g., y000000000000.boot).
   Example:
   
   ```
   include:config "http://10.2.1.158/HTTP Directory/y000000000044.cfg"
   ```
4. Upload the boot file to the root directory of the provisioning server.
5. Trigger IP phones to perform an auto provisioning for configuration update.

The boot file is only applicable to IP phones running firmware version 81 or later. For more information on auto provisioning, refer to Yealink SIP IP Phones Auto Provisioning Guide_V81.

**Configuring the Push XML Server Address**

The IP address or domain name of the push XML server is specified in the **Push XML Server IP Address** field. After configuration, the IP phone will be able to accept the HTTP(s) POST from the server.

**To configure the Push XML Server via web user interface:**

1. Access the web user interface of the phone.
2. Click on **Features -> Remote Control**.
3. Enter IP addresses or domain names in the **Push XML Server IP Address** field.
   
   The valid values must be within 512 characters. Each IP address or domain name is separated by a comma. If this field is left blank or the value is set as “any”, the phone will reject HTTP POST messages from any server.

4. Click **Confirm** to accept the change.

**To configure the Push XML Server using configuration files:**

1. Add/Edit the Push XML Server parameters in the configuration file (e.g., y000000000044.cfg).
The following table shows the information of parameters:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Permitted Values</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>push_xml.server</td>
<td>IP address</td>
<td>Blank</td>
</tr>
</tbody>
</table>

**Description:**
Configures the IP address of the push XML server.

**Note:** Each IP address or domain name is separated by a comma. If this field is left blank or the value is set as “any”, the phone will reject HTTP POST messages from any server.

**Web User Interface:**
Features->Remote Control->Push XML Server IP Address

**Phone User Interface:**
None

The following shows an example of configuring push XML server in the configuration file:

```
push_xml.server = 10.3.6.158
```

1. Set the parameter in the configuration file.

2. Upload the configuration file to the root directory of the provisioning server.

3. Reference the configuration file in the boot file (e.g., y000000000000.boot).
   Example:
   ```
   include:config "http://10.2.1.158/HTTP Directory/y000000000044.cfg"
   ```

4. Upload the boot file to the root directory of the provisioning server.

5. Trigger IP phones to perform an auto provisioning for configuration update.

The boot file is only applicable to IP phones running firmware version 81 or later. For more information on auto provisioning, refer to [Yealink_SIP-T2_Series_T19(P)_E2_T4_Series_TS_Series_WS_Series_CP_Series_IP_Phone_Auto_Provisioning_Guide_V81](#).

Upon receiving the POST message, the phone will display the information or execute the command contained in the POST message.
Example of a POST message with the XML content:

```
POST /HTTP/1.1
[
[Expert Info (Chat/Sequence): POST / HTTP/1.1]
[Message: POST / HTTP/1.1]
[Severity level: Chat]
[Group: Sequence]
[Response Code: 200 OK]
[Request Method: POST]
[Request URI: /]
[Request Version: HTTP/1.1]
[Host: 10.3.20.3]
[Referer: 10.3.6.148]
[Connection: Keep-Alive]
[Content-Type: text/xml]
[Content-Length: 152]
]
[
[Full request URI: http://10.3.20.3/]
]
<YaleIPPhoneTextScreen>
<Rep="yes">
<Title>
Push test
</Title>
<Text>
This is a test for pushing text to a phone.
</Text>
</YaleIPPhoneTextScreen>
```

In this example, the phone will play a tone and display the information shown as below:

![Push test](image)

**Configuring the XML SIP Notify**

You can configure the XML SIP Notify via web user interface. It will enable or disable SIP NOTIFY messages to be processed by the phone.

To configure the XML SIP Notify via web user interface:

1. Access the web user interface of the phone.
2. Click on Features -> Remote Control.
3. Select **Enabled** from the pull-down list of **SIP Notify** field.

![XML Browser Developer's Guide for Yealink IP Phones](image)

4. Click **Confirm** to accept the change.

**To configure the XML SIP Notify using configuration files:**

1. Add/Edit the XML SIP Notify parameters in the configuration file (e.g., `y000000000044.cfg`).

   The following table shows the information of parameters:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Permitted Values</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>push_xml.sip_notify</td>
<td>0 or 1</td>
<td>0</td>
</tr>
</tbody>
</table>

   **Description:**
   Enables or disables the phone to process the push XML via SIP NOTIFY message.
   - **0** - Disabled
   - **1** - Enabled

   **Web User Interface:**
   Features -> Remote Control -> SIP Notify

   **Phone User Interface:**
   None

   The following shows an example of configuring Block XML In Calling in the configuration file:

   ```
   push_xml.sip_notify = 1
   ```

   2. Upload the configuration file to the root directory of the provisioning server.

   3. Reference the configuration file in the boot file (e.g., `y000000000000.boot`).

      [Example:
      ```
      include:config "http://10.2.1.158/HTTP Directory/y000000000044.cfg"
      ```
      ]

   4. Upload the boot file to the root directory of the provisioning server.

   5. Trigger IP phones to perform an auto provisioning for configuration update.
The boot file is only applicable to IP phones running firmware version 81 or later. For more information on auto provisioning, refer to Yealink_SIP-T2_Series_T19(P) E2_T4_Series_TS_Series_WS_Series_CP_Series_IP_Phones_Auto_Provisioning_Guide_V81.

Upon receiving the XML SIP NOTIFY message, the phone will display the information or execute the command contained in the NOTIFY message.

Example of a SIP Notify with the XML content:

```
NOTIFY sip:303@192.168.168.75:5063 SIP/2.0
From: "303"<sip:303@192.168.168.200>;tag=41e83658-c0a6a8c8-13c4-50022-1a1b1-17e4badc-1a1b1
To: "303"<sip:303@192.168.168.200>;tag=933303487
Call-ID: 33220222698@192.168.168.75
CSeq: 2 NOTIFY
Via: SIP/2.0/UDP 192.168.168.200:5060;rport;branch=t9bG4bK-1a22f-6618b71-5c4a8ac7
Subscription-State: active
Event: Yealink-xml
Max-Forwards: 70
Supported: replaces,timer
Contact: <sip:303@192.168.168.200>
Content-Type: application/xml
Content-Length: 1353

<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneTextScreen
  BEEP="yes"
  defaultIndex="2"
  cancelAction="http://10.1.0.105/cancel.php"
  doneAction="http://10.1.0.105/menu.php"
  Timeout="10"
  LockIn="no">
  <Title wrap="yes">TextScreen</Title>
  <Text>Today I am very glad, as you pleased?</Text>
  <SoftKey index="1">
    <Label>Select</Label>
    <URI>SoftKey:Select</URI>
  </SoftKey>
  <SoftKey index="2">
    <Label>Default</Label>
    <URI>http://10.1.0.105/menu1.xml</URI>
  </SoftKey>
</YealinkIPPhoneTextScreen>
```

In this example, the phone will play a tone and display the information shown as below:

![Text screen]

**Today I am glad, as you pleased?**

**Configuring the Default Input Method**

You can specify the default input method when the type of input is “string” in the InputScreen object. For more information on InputScreen, refer to InputScreen Object on page 26.
To configure the default input method using configuration files:

1. Add/Edit default input method parameter in the configuration file (e.g., y000000000044.cfg).

The following table shows the information of parameter:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Permitted Values</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>default_input_method.xml_browser_input_screen</td>
<td>Abc, 2aB, 123, abc or ABC</td>
<td>2aB</td>
</tr>
</tbody>
</table>

Description:
Configures the default input method when the type for input box is set to “string” in the InputScreen object.

Example:
default_input_method.xml_browser_input_screen = 2aB

Web User Interface:
None

Phone User Interface:
None

The following shows an example of configuring default input method in the configuration file:

default_input_method.xml_browser_input_screen = 2aB

2. Upload the configuration file to the root directory of the provisioning server.

3. Reference the configuration file in the boot file (e.g., y000000000000.boot).

Example:
include:config "http://10.2.1.158/HTTP Directory/y000000000044.cfg"

4. Upload the boot file to the root directory of the provisioning server.

5. Trigger IP phones to perform an auto provisioning for configuration update.

The boot file is only applicable to IP phones running firmware version 81 or later. For more information on auto provisioning, refer to Yealink_SIP-T2_Series_T19(P) E2_T4_Series_T5_Series_W5_Series_CP_Series_IP_Phones_Auto_Provisioning_Guide_V81.
Troubleshooting

This chapter provides general troubleshooting information to help to solve the problems you might encounter when developing XML applications for Yealink IP phones. Besides, it also provides related troubleshooting tools and parsing error debug example for you to trace errors. If you require additional information or assistance, contact your system administrator.

Why does the phone display "Loading error!" when executing the XML object?

- Ensure that the network is reachable.
- Ensure that the server is running properly.
- Ensure that the HTTP server application is running properly.
- Ensure that the URI is resolved.
- Ensure that the XML object file exists on the server.
- Ensure that the URI is parsed.

Why does the phone display "File layout error!" when executing the XML object?

- Check whether the XML object files' syntax is right. For example, XML tags are in pairs.

Troubleshooting Tools

The following tools will help you troubleshoot problems with the XML services.

- Standard web browser (Microsoft Internet Explorer 6.0 or a later version)
  - Verify the connectivity.
  - Verify the validity of the URI called by the phone.
- Network packet analyzer such as Wireshark
  - Verify what is exchanged between the phone and the server.
- HTTP Server log
  - Verify if the HTTP GET is reached the server.
  - Verify the parameters of the HTTP GET.
- Phone log (syslog)
  - Verify how the phone processes a XML request.
Troubleshooting

Parsing Error Debug Example

Some of the XML editors (such as UltraEdit and Dreamweaver) can also verify the XML syntax and detail the related error in the output window. The following takes the Dreamweaver tool as an example for reference.

After you execute the XML object, the LCD screen will prompt “File layout error!”.

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>
<YealinkIPPhoneStatus
  Beep="yes"
  SessionID="125"
  Timeout="600">
  <Message />
  <Message Size="normal" Align="center" Color="black" Account="" Icon="DND">DND is enabled</Message>
  <Message Size="small" Align="right" Color="green" Account="" Icon="Message">1 New Message</Message>
</YealinkIPPhoneStatus>
```

The Dreamweaver tool tells us where the problem is. The error is on the last line, it should be `</YealinkIPPhoneStatus>`.
Appendix

Customizing an Image File

Yealink provides a tool called “PictureExDemo” to convert a “jpg”/“bmp”/“png” file to a “dob” file, and also provides a tool called “Dob2Text.exe” to convert a “dob” file to the hexadecimal string to be used for the ImageScreen and ImageMenu objects. Ask Yealink reseller or FAE for these two tools. For more information on how to convert a “bmp” file to a “dob” file, refer to Customizing a Logo Template File section in Yealink_SIP-T2_Series_T19(P) E2_T4_Series_T5_Series_W5_Series_CP_Series_IP_Phones_Administrator_Guide_V81.

To convert a “dob” file to the hexadecimal string:

1. Place the tool “Dob2Text.exe” and the “dob” file to be converted in the same directory of your local system.

2. Double click “Dob2Text.exe” to launch the application.

3. Enter the name of the “dob” file (e.g. Yealink.dob), and press the Enter key.

If the conversion is successful, a file will be generated in the same directory, whose content is the hexadecimal string to be used to specify the image in the ImageScreen object and ImageMenu Object. In addition, you can obtain the width and height of the image from the name of the generated file, for example, yealink.dob_206_80.out, where 206 represents the width of the image and 80 represents the height of the image. As well, specify the width and height of the image in the object with these two values obtained from the name of the generated file (e.g. 206 and 80), otherwise the image will not be displayed correctly.
Customer Feedback

We are striving to improve our documentation quality and we appreciate your feedback. Email your opinions and comments to DocsFeedback@yealink.com.
