

Installing the Applications on Yealink Smart Media Phones

Introduction

Yealink smart media phones offer access to a large amount of third-party Android applications. The third-party applications can be installed or uninstalled either one by one or in batch.

Yealink smart media phones support standard version of the application deployment and management function. And this guide provides detailed information on how to install/uninstall the applications in standard version.

The features described in this guide are available on the following IP phones:

- SIP-T58V, SIP-T58A, SIP-T56A IP phones and CP960 IP conference phones running firmware version 80 or later.

To install/uninstall applications using configuration files:

1. Add/Edit corresponding parameters in configuration files (e.g., app.cfg).

The following table lists the information of parameters:

Parameters	Permitted Values	Default
pm.version	standard	standard
Description: Configures the version of the application deployment and management function. Web User Interface: None Phone User Interface: None		
app.install_url	URL within 511 characters	Blank
Description: Configures the access URL of the third-party application. Example: app.install_url = http://192.168.10.25/QQ.apk During the auto provisioning process, the IP phone connects to the HTTP provisioning		

Parameters	Permitted Values	Default
<p>server "192.168.10.25", and downloads the application "QQ.apk".</p> <p>If you want to install/update multiple applications to the phone simultaneously, you can configure as following:</p> <p>app.install_url = http://192.168.10.25/QQ.apk</p> <p>app.install_url = http://192.168.10.25/Kugou.apk</p> <p>Web User Interface:</p> <p>None</p> <p>Phone User Interface:</p> <p>None</p>		
app.uninstall	app name/app name.apk/package name	Blank
<p>Description:</p> <p>Uninstalls the specified third-party application.</p> <p>Example:</p> <p>To uninstall QQ, do one of the following:</p> <p>app.uninstall = QQ</p> <p>app.uninstall = QQ.apk</p> <p>app.uninstall = com.tencent.mobileqq</p> <p>If you want to uninstall multiple applications on the phone simultaneously, you can configure as following:</p> <p>app.uninstall = QQ</p> <p>app.uninstall = Kugou</p> <p>Web User Interface:</p> <p>None</p> <p>Phone User Interface:</p> <p>None</p>		

The following shows an example of QQ installation in configuration files:

pm.version = standard

app.install_url = http://192.168.10.25/qq.apk

The following shows an example of uninstalling QQ in configuration files:

pm.version = standard

app.uninstall = QQ

2. Upload the boot file and configuration file to the root directory of the provisioning server.
3. Trigger IP phones to perform an auto provisioning for configuration update.

For more information on auto provisioning, refer to [Yealink_SIP-T2_Series_T19\(P\)
E2_T4_Series_T5_Series_W5_Series_IP_Phones_Auto_Provisioning_Guide_V81](#).
