About This Guide

Yealink Device Management Platform (YDMP) possesses the centralized deployment, the management, the analysis, the alarm monitoring, the device diagnosis, the account registration, and other features. The management platform allows administrators to deploy and configure for Yealink devices used in an enterprise.

This guide provides operations for administrators to use YDMP.

- Related Documentations

- Summary of Changes

Related Documentations

Except for this guide, we also provide the following document of the corresponding device:

- Quick Start Guide introduces how to deploy devices and configure the most basic features available on devices.
- User Guide introduces the basic and advanced features available on devices.
- Administrator Guide introduces how to deploy the devices.
- Auto Provisioning Guide introduces how to deploy devices by using the configuration and the boot files. The purpose of Auto Provisioning Guide is to serve as basic guidance for provisioning Yealink phones in a provisioning server. If you are new to this, it is helpful to read this guide.
- API documents introduces how to call the API of YDMP.

You can download the above documents from Yealink's official website or the web page of YDMP. The address of Yealink's official website is as below: *http://support.yealink.com/documentFront/forwardToDocumentFrontDisplayPage*.

For more supports or services, contact Yealink reseller or go to Yealink Technical Support online: *http://support.yealink.com/*.

Summary of Changes

- Changes for Release 35, Guide Version V3.5.0.1
- Changes for Release 34, Guide Version V3.4.0.10

Changes for Release 35, Guide Version V3.5.0.1

The following section is new for this version:

• Uploading DST Rules

Major updates have occurred to the following section:

• Managing Tasks

Changes for Release 34, Guide Version V3.4.0.10

The following sections are new for this version:

- Pushing Configuration Files to Devices
- Pushing Firmware to Devices
- Pushing Resource Files to Devices
- Diagnosing Devices
- Managing the Site Configuration
- Setting Parameters
- Exporting the Packets, Logs, and Configuration Files by One Click
- Exporting the Server Log
- Viewing the Account Code

Major updates have occurred to the following sections:

- Port Requirements
- Installing YDMP (3.X)
- Upgrading YDMP (from V3.1 to V3.X)
- Configuring the Common.cfg File
- Adding Sites
- Going to the Device Diagnostics Page

Getting Started

This chapter introduces the requirements of Yealink device management platform.

- Hardware and Software Requirements
- Port Requirements
- Browser Requirements

• Supported Device Models

Hardware and Software Requirements

The requirements of the hardware and software are different based on different server requirements. The version number of Linux operating system is CentOS 7.5. The detailed requirements are as below:

Device Quantity	CPU	RAM	Hard Drive
0~6000	8-core	16G	It should be at least
6000~15000	16-core	32G	200G, and the capacity of the hard drive
15000~30000	32-core	64G	increases by 30G with every 1000 devices added.

Port Requirements

You need to open five ports: 443, 9989, 8446, 9090, and 80. We do not recommend that you modify these ports.

Port	Description
443	It is used for accessing the device management platform via HTTPS.
9989	It is used for the phone to download the configuration files and calling the API.
9090	TCP persistent connection. It is used for reporting the device information.
8446	It is used for mutual authentication between YDMP and the devices when pushing the configuration, the firmware, and the resource files to the devices.
80	It is used for accessing the device management platform via HTTP.

Browser Requirements

YDMP supports the following browsers:

Browser	Version
Firebox	55 or later
Chrome	55 or later
Internet Explorer	11 or later
Safari	10 or later

Supported Device Models

Device Types	Supported Device Models	Version Requirements
	SIP-T27P/T27G/ T29G/T41P/T41S/T42G/T42S/ T42U/T46G/ T46S/T48G/T48S/T52S/T54S	XX.83.0.30 or later (except for XX.84.0.10). XX represents the fixed number for each device model.
	SIP-T56A/T58	58.83.0.5 or later.
SIP IP Phones	SIP-T19(P)E2/T21(P)E2/T23P/ T23G/T40P/T40G	XX.83.0.30 or later (XX.84.0.1 is not supported and XX.84.0.70 or later versions an not supported anymore). XX represents the fixed number for each device model.
	SIP-CP960	73.83.0.10 or later.
	SIP-CP920	78.84.0.15 or later.
	SIP-T53/T53W	95.84.0.10 or later.
	SIP-T54W	96.84.0.10 or later.
	SIP-T57W	97.84.0.30 or later.
	W60B	77.83.0.65 or later.
	VP59	91.283.0.10 or later.
Skype for Business	T41S/T42S/T46S/T48S	66.9.0.45 or later (except for 66.9.0.46).
HD IP phones	T58/T56A/T55A	55.9.0.6 or later.
	CP960	73.8.0.27 or later.
Teams phones	CP960	73.15.0.20 or later.
(It is not available for	T56A/T58	58.15.0.20 or later.
managing the accounts	T55A	58.15.0.36 or later.
and viewing the call quality)	VP59	91.15.0.16 or later.
Video Conferencing Systems	VC200/VC500/VC800/VC880	XX.32.10.25/XX.32.0.25 or later. XX represents the fixed number for each device model
	PVT950/PVT980	1345.32.10.40 or later.
	VP59	91.332.0.10 or later.
Zoom phones	CP960	73.30.0.10 or later.
Room System	MVC500/MVC800/MVC300/ CP960-UVC Zoom Rooms Kit/ VP59 Zoom Rooms Kit	92.11.0.10 or later

You can manage the following devices via the device management platform:

Deploying YDMP

This chapter provides instructions on how to install and deploy YDMP and introduces its interface.

- Updating YDMP (from V2.0 to V3.1)
- Restoring YDMP (from V3.1 to V2.0)
- Installing YDMP (3.X)
- Upgrading YDMP (from V3.1 to V3.X)
- Installing the Diagnostic Script
- Logging into the YDMP
- Home Page
- Running State Page
- Logging out of YDMP
- Activating the License
- Uninstalling YDMP

Updating YDMP (from V2.0 to V3.1)

The following is an example of updating YDMP from V2.0.0.14 to V3.1.0.13.

Before you begin

- Obtain the installation package of YDMP from the Yealink distributor or SE and then save it at the path / usr/local.
- Meet the following requirements: Hardware and Software Requirements and Port Requirements .

Procedure

- 1. Log into CentOS as the root user and open the terminal.
- 2. Run the command:

cd /usr/local tar -zxf DM_3.1.0.13.tar.gz cd yealink_install&& tar -zxf install.tar.gz ./upgrade_v2_to_v3.sh

- 3. According to the prompts, enter *1* which means updating.
- 4. According to the prompts, enter the server IP address and enter *Y* to confirm the IP address.

Results

YDMP will be updated to the corresponding version if it is updated successfully.

Note: Updating the version has no influence on the devices connected to YDMP.

Restoring YDMP (from V3.1 to V2.0)

Procedure

1. Log into CentOS as the root user and open the terminal.

2. Run the command:

cd /usr/local/yealink_install/ ./upgrade_v2_to_v3.sh

- 3. According to the prompts, enter 2 which means restoring.
- 4. According to the prompts, enter the password Yealink1105.
- **5.** According to the prompts, enter *Y* to confirm to restore.
- **6.** According to the prompts, enter *Y* to clean up the data.

When the restoring is completed, YDMP will be restored to V2.0.

- Attention: Note that if you enter the wrong password, do not restore YDMP again, because it will delete all the data on YDMP. However, you can follow the steps below:
 - 1. Run the command:

cd /usr/local/ mv yealink yealink_bak #it means making a data backup for V2.0 cd yealink_install/ ./uninstall #it means uninstalling V3.0

- 2. According to the prompts, enter the password Yealink1105.
- 3. According to the prompts, enter *Y* to confirm to uninstall.
- 4. According to the prompts, enter *Y* to clean up the data.
- 5. After uninstalling, run the command below:

cd /usr/local/ mv yealink_bak/ yealink #it means restoring the data for V2.0 #create the contents that are deleted cd /var/log/yealink/ mkdir dm cd dm/ mkdir tomcat_dm cd tomcat_dm/ touch catalina.out #Run the command below to start the corresponding services of V2.0: systemctl start mariadb systemctl start redis systemctl start rabbitmq-server systemctl start tcp-server systemctl start tomcat_dm

YDMP will be restored to V2.0.

Installing YDMP (3.X)

There are stand-alone installation and cluster installation. The following is an example of installing V3.5.0.1.

Before you begin

- Obtain the installation package of YDMP from the Yealink distributor or SE and then save it at the path / usr/local.
- Meet the following requirements: *Hardware and Software Requirements* and *Port Requirements*. When you install YDMP in the version 3.3.0.0 or later for the first time, if your hardware does not meet the basic requirements for installing YDMP, your installation will be forbidden. Change your hardware and reinstall YDMP according to the prompts.

Procedure

- 1. Log into CentOS as the root user and open the terminal.
- 2. Run the command:

cd /usr/local tar -zxf DM 3.5.0.1.tar.gz cd yealink install&& tar -zxf install.tar.gz ./install --host the internal IP or the external IP ##For the deployment of a single NIC (the internal network or the external network), run this command. ## ./install --host the internal IP -e nat ip=the external IP behind NAT ##For the deployment of dual NIC (the internal and the external network) and NAT, run this command. This command is only applicable to 3.3.0.0 or later versions. Make sure that the default gateway is the gateway of the external NIC. Run the command "ip route" to request the default gateway. Run the command "ip route add default via gateway IP dev the name of the external NIC" to edit the default gateway. ## ./install --host the internal IP -e nat ip=the external IP ##For the deployment of dual NIC (the internal and the external network), run this command. This command is only applicable to 3.3.0.0 or later versions. ##

3. Select A as the installation method.

<pre>/conf/roles/tasks/llconfigure.yml /conf/roles/tasks/llconfigure.yml /conf/roles/tasks/llconfigure.yml /conf/roles/templates/llconf.j2 /conf/roles/templates/conf.j2 /conf/roles/templates/conf.j2 /conf/roles/vars/main.yml /conf/roles/vars/main.yml /confroles/vars/main.yml /rotestanger-master yealink_install/installhost 10.200.112.184</pre>

	Default profile /usr/local/yealink/data/install.conf does not exist. please make a choice: iii timeour 30 sector for allinome b c c c c c c c c c c c c c c c c c c c	

Results

The installation starts and takes some time to finish.

Upgrading YDMP (from V3.1 to V3.X)

Before you begin

- Obtain the installation package of YDMP from the Yealink distributor or technical support engineers and then save it at the path /usr/local.
- Meet the following requirements: Hardware and Software Requirements and Port Requirements .

Procedure

- 1. Log into CentOS as the root user and open the terminal.
- **2.** Do one of the following:

• If you want to upgrade YDMP to the version earlier than 3.4.0.10 (not including 3.4.0.10), run the following command:

cd /usr/local rm -rf yealink_install tar -xvzf DM_3.3.0.0.tar.gz cd yealink_install&& tar -xvzf install.tar.gz ./upgrade --host the internal IP or the external IP ##For the deployment of a single NIC (the internal network or the external network), run this command.## ./upgrade --host the internal IP -e nat_ip=the external IP behind NAT ##For the deployment of dual NIC (the internal and the external network) and NAT, run this command. This command is only applicable to 3.3.0.0 or later versions.## ./upgrade --host the internal IP -e nat_ip=the external IP ##For the deployment of dual NIC (the internal and the external network), run this command. This command is only applicable to 3.3.0.0 or later versions.##

 If you want to upgrade YDMP to the version later than 3.4.0.10 (including 3.4.0.10), run the following command:

cd /usr/local rm -rf yealink_install tar -xvzf DM_3.5.0.1.tar.gz cd yealink_install&& tar -xvzf install.tar.gz /install -m upgrade ##For the deployment of a single NIC (the internal network or the external network), run this command.## /install -m upgrade -e nat_ip=the external IP behind NAT ##For the deployment of dual NIC (the internal and the external network) and NAT, run this command. This command is only applicable to 3.3.0.0 or later versions. ## /install -m upgrade -e nat_ip=the external IP ##For the deployment of dual NIC (the internal and the external network), run this command. This command is only applicable to 3.3.0.0 or later versions. ##

Results

YDMP will be upgraded to the corresponding version if it is upgraded successfully.

Note: Upgrading the version has no influence on the devices connected to YDMP.

Installing the Diagnostic Script

If you fail to install YDMP or some exceptions occur to the service, you can run the diagnostic script to collect the related environment and service information of YDMP, and pack the file named *ydmp_diag_time.tar.gz*. And then, you can provide the developers or operation and maintenance engineers with the file.

About this task

This script is packed in install.tar.gz.

Procedure

Unzip and run the script.

[root@manager-master yealink_install]# ./diag Starting to execute diag script ...

Results

If you succeed in installing, the page is shown as below:

PLAY RECAP ********** manager-master	**************************************		**************************************

YDMP deploy failed.Please check the cause of the failure from log above and deploy again.
Do vou want to execute diag script for check.and give the diagnosis result to administrator for YDMP?([v/n]):

Logging into the YDMP

Procedure

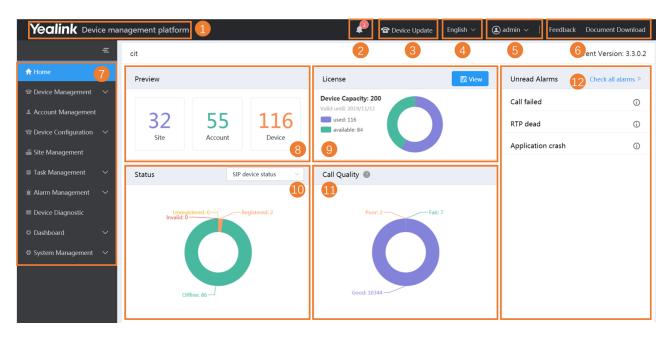

1. Enter https://<IP address>/(for example, https: //10.2.62.12/) in the browser address box, and then press Enter.

Yealink Device management platform	English × Feedback Document Download
	Welcome to login
	Password
	Login Forget Password

- 2. Select the desired language from the drop-down menu of Language in the top-right corner.
- 3. Enter your username (default: admin) and the password (default: v123456789).
- 4. Click Login.
- 5. If you log into the platform for the first time, the system will remind you to change the password, click **Change** to go to the homepage of the device management platform.

Home Page

After logging in, you can see the home page displayed as below:

Number	Description
1	Go to the home page quickly when you are browsing other pages.
2	Display the number of unread alarms and the type of alarms.
3	Go to the Device List page quickly.
4	Change the display language.
5	Go to the page of setting the administrator account.
6	Go to the page of sending feedback or downloading a document.
7	Navigation pane.
8	 Data preview: Displays the number of sites, accounts and devices. Click the desired module to go to the corresponding module.
9	License: Displays the current number of manageable devices.

Number	Description
10	 Device status: Select a device type. Displays the number of the unregistered, the registered, the invalid and the offline devices. Click the corresponding device status to go to the page that lists all the devices of
11	 this status. Call quality: Displays the number of the good, the bad or the poor call quality. You can click the desired module to view the call statistics.
12	 Unread Alarms: Click Check all alarms to go to the Alarm List page. Hover the mouse over the icon (i) to view the alarm details.

Running State Page

Click **Dashboard** > **Running state** to go to the Running State page. You can view the number of accounts and devices, the device status, the statistics of the model and the firmware. It is displayed as below:

	55	Device Status	SIP device status
Accounts 123 Devices		Registered: 3 Invalid: 0	
Model Statistics Firmware	Statistics		
Model ~	Device Model \sim	Device Proportion	Operation
SIP-T46G	Audio	1 0.813%	View
	Audio	2 1.626%	View
SIP-T55A(Teams)		68 55.285%	View
SIP-T55A(Teams)	Audio		

- Click Accounts to go to the Account Management page, then you can manage the account directly.
- Click Devices to go to the Device Management page, then you can manage devices directly.
- In the **Device Status** module, select the device type, click the corresponding status (offline, registered, invalid, and unregistered) to go to the Device List page, and then you can update the device status directly.
- Click Model Statistics to view all the device information, including the model and the proportion. Click View beside the desired device to go to the Device Management page, then you can view the device information or update this device.
- Click **Firmware Statistics** to view all the running firmware. Click **View** beside the desired firmware to go to the Device Management page, then you can view the device information or update this device.

Logging out of YDMP

Procedure

Hover your mouse on the account avatar in the top-right corner, and click **Exit**. You will log out of the current account and return to the Login page.

Activating the License

Before managing your devices via the device management platform, you need to purchase the license from your supplier and activate it.

Procedure

- **1.** *Importing the Device Certificate* .
- 2. Activating the License Online or Activating the License Offline.
- *Importing the Device Certificate*
- Activating the License Online
- Activating the License Offline

Importing the Device Certificate

You need to import a device certificate which is associated with the server uniquely.

Before you begin

You provide the enterprise name, the distributor and the country for Yealink. Yealink will generate a device certificate according to the information you provide.

Procedure

- 1. Click System Management > License.
- 2. Select the device certificate.
 - **Note:** Note that one device certificate for one server, that is, if you have imported the device certificate to one server, you cannot import the certificate to another server.

If the association between the device ID and the server succeeds, the page will display as below:

License Device ID : A63A44F4B0DF2F5C

Activating the License Online

If your server can access the public network, you can activate the license online.

Before you begin

- If *Importing the Device Certificate* is finished, the hardware information will be sent to Yealink License server automatically.
- You provide the device ID, the license type, the concurrent number and the validity for Yealink. Yealink will authenticate based on the above information.

Procedure

Click System Management > License > Refresh.

 \times

After Yealink authorizes the license, you can see the license in the list.

Activating the License Offline

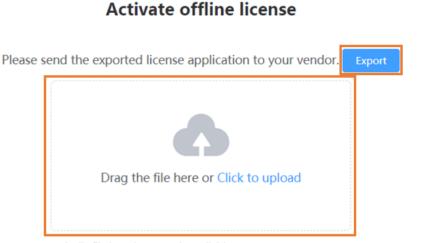

If your server cannot access the public network, you can activate the license offline.

Before you begin

- *Importing the Device Certificate* is finished.
- You provide the device ID, the license type, the concurrent number and the validity for Yealink. Yealink will authenticate based on the above information.

Procedure

- 1. Click System Management > License > Activate offline license.
- 2. Click Export Config File. Send the exported REQ file to Yealink. Yealink will authenticate after importing the REQ file. Yealink will generate the LIC authentication file and send it to you.
- 3. Click the field of the dotted box to upload the authorization file obtained from Yealink.

Only .lic file less than 1MB is available.

Note: The authentication file is unique, that is, different servers use different authentication files. You cannot activate your server by importing the authentication files of other servers.

Results

The license is displayed in the list.

Uninstalling YDMP

Procedure

- 1. Log into CentOS as the root user and open the terminal.
- 2. Run the command:

cd /usr/local/yealink_install ./uninstall

3. According to the prompts, enter the password Yealink1105.

YDMP will be uninstalled from the CentOS.

Deploying the Devices

Before you manage the devices via the device management platform, you should deploy the devices to make them connected to the device management platform.

- Deploying SIP Devices
- Deploying the Room System
- Deploying USB Devices

Deploying SIP Devices

Before you begin

Note: Note that the device should support the device management platform. Otherwise, you should upgrade the device firmware first.

Procedure

- 1. Using Certificates for Mutual TLS Authentication .
- 2. If there is a provisioning server you are using in your environment, configure the common cfg file (refer to *Configuring the Common.cfg File*).
- **3.** If there is no provisioning server, you need to configure the devices to obtain the provisioning server address in one of the following ways:
 - DHCP option 66, 43, 160 or 161.

The DHCP option must meet the following format: https://<IP address>/dm.cfg.

(for example, https://10.2.62.12/dm.cfg)

- Deploying Devices on the RPS (Redirection & Provisioning Server) Management Platform, and configure the server address.
- Configuring the Server Address , and deploy a single phone.

Results

After the device is connected to the device management platform, the device information will be displayed in the device list.

- Using Certificates for Mutual TLS Authentication
- Configuring the Common.cfg File
- Deploying Devices on the RPS (Redirection & Provisioning Server) Management Platform
- Configuring the Server Address

Related concepts

Supported Device Models

Using Certificates for Mutual TLS Authentication

To allow the device management platform and the device to authenticate with each other, the platform supports mutual TLS authentication by using default certificates.

Configuring Server Certificates

When the device management platform sends a TLS connection request to the device, the device management platform needs to verify whether the device can be trusted. The device will send the default device certificate to the platform for authentication.

Procedure

- 1. Log into the web user interface of the device.
- 2. Click Security > Server Certificates.
- 3. Select Default Certificates from the drop-down menu of Device Certificates.

The device will send the default device certificate to the platform for authentication.

Configuring Trusted Certificates

When a device sends an SSL connection request to the platform, the device needs to verify whether the platform can be trusted. The platform sends its certificate to the device and the device verifies this certificate based on its trusted certificates list.

Procedure

- 1. Log into the web user interface of the device.
- 2. Click Security > Trusted Certificates.
- 3. Select Enabled from the drop-down menu of Only Accept Trusted Certificates.

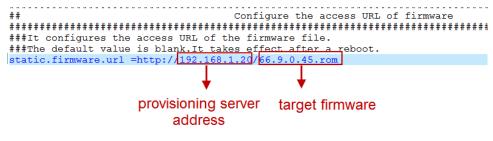

Only when the authentication succeeds, will the device trust the platform.

Configuring the Common.cfg File

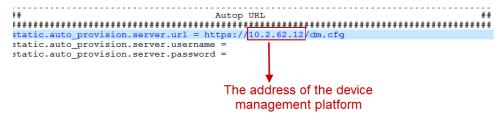

If the device does not support the device management platform, you need to upgrade the firmware to a supported one before you connect the device to the device management platform. For easy deployment, you can configure the parameters of upgrading the firmware and the access URL of the device management platform in the Common.cfg file.

Procedure

- 1. Open the Common.cfg file of the corresponding device.
- 2. If your device does not support the device management platform, upgrade the firmware of the device. Place the target firmware on your provisioning server, and then specify the access URL of the firmware.

3. Configure the provisioning URL to connect the devices to the device management platform.

4. Optional: Add the following configuration to your Common.cfg file, to make the device automatically connected to the corresponding site.

Note:

• Only the specific firmware version supports this feature. For more information, contact Yealink technical support engineers.

The supported devices are as below: CP960 (73.84.0.21), T58V (58.84.0.26), VP59 (91.283.0.47), T4S/T5W (x.84.0.102), and W60B (77.83.0.72).

- The priority (the devices automatically connected to the site) in the descending order is site IP setting, and then the site setting in the Common.cfg file (see *Adding Sites*).
- 5. Save the file.

Results

After auto provisioning, the devices will be connected to the device management platform. **Related concepts**

Supported Device Models

Deploying Devices on the RPS (Redirection & Provisioning Server) Management Platform

If you deploy the device through the RPS management platform for the first time, after the devices are powered on and connected into the network, the RPS management platform pushes the address of the device management platform to the devices so that they can be connected to the platform.

Procedure

1. Log into the RPS management platform.

The address of the RPS management platform is https://dm.yealink.com/manager/login.

- 2. On the Server Management page, add the server URL.
- 3. On the Device Management page, add or edit the device information.

The server URL must meet the following format: https://<IP address>/dm.cfg

(for example: https://10.2.62.12/dm.cfg)

Results

After you trigger the device to send an RPS request, the device will be connected to the device management platform.

Note: For more information on how to use the RPS management platform, refer to *Yealink Management Cloud Service for RPS Admin Guide*.

Configuring the Server Address

Before deploying the device, if the DHCP server is not available, you need to configure the server address to make the device connected to the device management platform.

Procedure

- 1. Log into the web user interface of the device.
- 2. Click Settings > Auto Provision.
- 3. Enter the provisioning server URL in the Server URL field.

The URL must meet the following format: https://<IP address>/dm.cfg

(for example, https://10.2.62.12/dm.cfg).

4. Click **Auto Provision Now**. The device will be connected to the device management platform successfully.

Deploying the Room System

About this task

For more information about deploying Room System, refer to Yealink RoomConnect User Guide.

Procedure

On your MTouch, open Yealink RoomConnect, go to **Remote Management**, and configure the related parameters.

The Room System will be connected to the device management platform automatically.

Deploying USB Devices

Before you begin

Install USB Device Manager client on the PC that is connected to the USB device.

About this task

For more information about the configuration of USB Device Manager client, refer to USB Device Manager Client User Guide.

Procedure

Open USB Device Manager client, go to **Config DM Server**, and complete the correspond configuration. The USB device will be connected to the device management platform automatically.

Managing Devices

The number of devices that you can manage on the device management platform depends on the license you purchased from the reseller or the distributor. You are not able to add new devices once the upper limit is reached. When some of your invalid orders cause some of the devices unable to manage, the device status will be invalid and you cannot manage it. If you still want to use this service, contact your service provider.

- Device Status
- Managing SIP Devices
- Managing USB Devices
- Managing Room System
- Managing Firmware
- Managing Resources

Device Status

Before managing devices, you can familiarize yourself with the device status.

- Device status of the SIP device
 - Registered: the device is online with an account registered in. You can use it and click it to view the account information.
 - Unregistered: the device is online without an account registered in.
 - Offline: the device is offline.
 - Invalid: the server license expires, or the number of the devices reported to the platform exceeds the number allowed in the license.
- Device status of the USB device and the Room System
 - Online: the application connected to the device is connected to YDMP.
 - Offline: the device is disconnected, or the application connected to the device is disconnected from YDMP.
 - Invalid: the server license expires, or the number of the devices reported to the platform exceeds the number allowed in the license.

Adding Devices

About this task

Note: Note that you need to deploy the device (refer to *Deploying SIP Devices*) so the device can be connected to the device management platform.

Procedure

- 1. Click Device Management > SIP Device List > Add Device.
- 2. Set and save the parameters.

Device Name	T48S	
*Site	Yealink	
*Model	SIP-T48S	
*MAC	001565f30712	
Bind Account (Maximum 16)	+ Add	

3. Optional: On the right side of the **Bind Account** field, click **Add**, and select an account and the account type to assign the account to the device.

Related tasks

Adding Accounts

Editing the Device Information

You can edit the device name and the site, or re-assign an account to the device.

Procedure

- 1. Click Device Management > SIP Device List.
- **2.** Click \square beside the desired device.
- 3. Edit the device information and save it.

Edit Device

Importing Devices

If you want to add devices quickly, you can import them in batch. You need to download the template, edit the devices information in the template and then import the template to the platform.

About this task

Note: Note that you need to deploy the device (refer to *Deploying SIP Devices*) so the device can be connected to the device management platform.

Procedure

Click Device Management > SIP Device List > Import.

Exporting the Device Information

You can export the basic information of all devices.

Procedure

Click **Device Management** > **SIP Device List** > **Export**.

Viewing the Information of SIP Device

You can view the information of SIP devices, including the MAC address, the model, the name, the IP, the firmware version, the status, the site and the report time.

Procedure

1. Click Device Management > SIP Device List.

You can click **Refresh** in the top-right corner to obtain the latest device information,

2. Click 🗟 beside the desired device.

Pushing Configuration Files to Devices

You can push the configuration files to one or multiple devices.

Before you begin

If there are no desired configuration files, you can refer to *Managing the Device Configuration* to add one first.

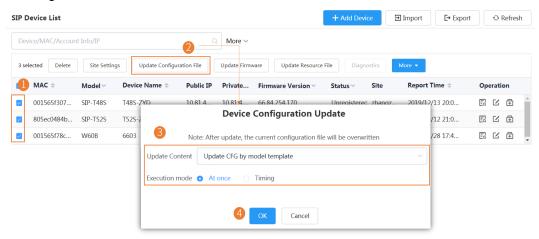

About this task

- When the device is in a call, the configuration file will not be pushed until the call is finished.
- When the device is offline or invalid, the configuration file cannot be pushed.
- When the device is unregistered, online or registered, the configuration file will be pushed.

For more information about the device status, refer to Device Status .

Procedure

- 1. Click Device Management > SIP Device List.
- 2. Push the configuration file to the selected devices.

Pushing Firmware to Devices

You can push the firmware to one or multiple devices.

Before you begin

If there is no desired firmware, you need to Adding Firmware .

About this task

- When the device is in a call, the firmware will not be pushed until the call is finished.
- When the device is offline or invalid, the firmware cannot be pushed.
- When the device is unregistered, online or registered, the firmware will be pushed.

For more information about the device status, refer to *Device Status*.

Procedure

- 1. Click Device Management > SIP Device List.
- 2. Push the firmware to the selected devices.

Enabling/Disabling DND

If your boss doesn't want to be disturbed during the break, you can enable DND for the boss's phone, and then cancel DND during office hours; if you need to make such settings every day, you can set it as a periodic task.

Procedure

Click Device Management > SIP Device List.

Sending Messages to Devices

If you need to perform operations, for example, updating the firmware for the device, and want to notify the user in advance, you can send a message to the device through the platform. The device management platform supports sending messages to single or multiple devices.

Procedure

Click Device Management > SIP Device List.

* Site	Yealink	

Exporting the Device Information

You can export the basic information of all devices.

Procedure

Click Device Management > USB Device List > Import.

Viewing the USB Device

You can view the information of the USB device, including the model, the device ID, the device name, the IP, the firmware version, the status, the site and the report time.

Procedure

Click Device Management > USB Device List.

You can click Refresh in the top-right corner to obtain the latest device information,

Searching for Devices

You can use the search bar or the filters to search for the desired devices.

Procedure

Click Device Management > USB Device List.

Managing Room System

- Editing the Device Information
- View the Information of the Room System
- Searching for Devices

- Setting the Site
- Rebooting Devices
- Pushing Firmware to Devices
- Deleting Devices

Editing the Device Information

You can edit the device name and the site, or re-assign an account to the device.

Procedure

- 1. Click Device Management > Room System.
- **2.** Click \square beside the desired device.
- 3. Edit the device information and save it.

~

View the Information of the Room System

You can view the information of the Room System, including the name, the MAC address, the model, the meeting room name, the IP, the operating system, the status, the site and the report time.

Procedure

1. Click Device Management > Room System.

You can click Refresh in the top-right corner to obtain the latest device information,

2. Optional: Click the blue font under the **Associated Device** tab and you can view the detailed information of the associated device of the room system.

	Note: If device is in a call, the device will reboot after the call Execution mode At once Timing			

Results

- If you select At once, the devices will be rebooted immediately.
- If you select Timing, the devices will be rebooted at the time you set.

Pushing Firmware to Devices

Before you begin

If there is no desired firmware, you need to Adding Firmware .

About this task

- When the device is in a call, the firmware will not be pushed until the call is finished.
- When the device is offline or invalid, the firmware cannot be pushed.
- When the device is unregistered, online or registered, the firmware will be pushed.

For more information about the device status, refer to Device Status .

- 1. Click Device Management > Room System.
- 2. Push the firmware to the selected devices.

Managing Firmware

You can manage all the device firmware via the device management platform.

- Adding Firmware
- Searching for Firmware
- Updating the Device Firmware
- Editing the Firmware
- Downloading the Firmware
- Deleting Firmware

Adding Firmware

Procedure

- 1. Click Device Management > Firmware Management.
- 2. In the top-right corner, click Add Firmware.
- 3. Configure the firmware information in the corresponding filed and upload the firmware file.
- 4. Click Save.

Searching for Firmware

Procedure

- 1. Click Device Management > Firmware Management.
- 2. Enter the firmware name, the version or the description of the firmware in the search box.
- 3. Click Search.

Updating the Device Firmware

When you need to update the device firmware, you can push the new firmware to the device. If it is not convenient for the device user to update the device during working time, you can set a timing task.

- 1. Click Device Management > Firmware Management.
- 2. Click 🖾 beside the desired firmware.

- **3.** Select the desired devices.
- 4. Click Push to Update.
- 5. Select a desired execution mode:
 - If you select At once, the firmware will be updated at once.
 - If you select **Timing**, configure the task name, the repeat type and the execution time, the firmware will be updated at a specific time.
- 6. Click OK.

7

Tip: You can also select the desired device in the Device List, click **Update Firmware**, and select the corresponding firmware version to update. Note that the firmware must be applicable to all selected devices.

Editing the Firmware

You can modify the firmware information, for example, the name and the version, or upload a new firmware to replace the old one.

Procedure

1. Click Device Management > Firmware Management.

- 2. Click 🗹 beside the desired firmware.
- 3. Edit the corresponding information.
- 4. Click Save.

Downloading the Firmware

Procedure

- 1. Click Device Management > Firmware Management.
- 2. Click 🖶 beside the desired firmware.
- 3. The firmware will be downloaded to your computer.

Deleting Firmware

Procedure

- 1. Click Device Management > Firmware Management.
- **2.** Select the desired firmware.
- 3. Click Delete.
- 4. Click OK according to the prompts.

Managing Resources

You can add and edit resource files, push resource files to devices or download them to your local system.

- Adding Resource Files
- Search for Resources
- Pushing Resource Files to Devices
- Editing Resource Files
- Downloading Backup Files

• Deleting Resource Files

Adding Resource Files

Procedure

- 1. Click Device Management > Resource Management.
- 2. In the top-right corner, click Add Resource.
- **3.** Configure the resource information in the corresponding filed and click **Upload** to upload the resource file.
- 4. Click Save.

Search for Resources

Procedure

- 1. Click Device Management > Resource Management.
- 2. Enter the resource name, the file name or the description in the search box.
- 3. Click Search.

Pushing Resource Files to Devices

Procedure

- 1. Click Device Management > Resource Management.
- 2. Click desired resource.
- 3. Select the desired devices.
- 4. Click Push to Update.
- 5. Select a desired execution mode:
 - If you select **At once**, the resource will be updated at once.
 - If you select **Timing**, configure the task name, the repeat type and the execution time, the firmware will be updated at a specific time.
- 6. Click OK.

6

Tip: You can also select the desired devices in the Device List, click **Update Resource File**, and select the corresponding resource type to update. The resource file must be applicable to all the selected devices.

Editing Resource Files

- 1. Click Device Management > Resource Management.
- 2. Click 🗹 beside the desired resource.
- 3. Edit the related information of the resource file in the corresponding field.
- 4. Click Save.

Downloading Backup Files

Procedure

- 1. Click Device Management > Resource Management.
- 2. Click beside the desired resource.
- 3. The file will be downloaded to your computer.

Deleting Resource Files

Procedure

- 1. Click Device Management > Resource Management.
- 2. Select the desired resource.
- 3. Click Delete.
- 4. Click OK according to the prompts.

Managing Sites

You can set sites according to your enterprise organization, and manage the devices in the same site.

The default site named after your company name is added when the system is initialized.

- Adding Sites
- Importing Sites
- Editing Sites
- Searching for Sites
- Deleting Sites

Adding Sites

- 1. Click Site Management.
- 2. In the top-right corner, click Add Site.
- 3. Set and save the parameters.

ite Name	IIUW		
arent Site	WULLLALA		~
escription	Maximum 1024 charac	ters.	
it. 10. 0			
ite IP 🕜	+ Add Public IP	Private IP	Operation
	10.152.123.56/9	10.12.12.49/12	K 🛞

Note:

Setting site IP makes the devices automatically assigned to the corresponding site if the device IP addresses are in the site IP range.

The priority (the devices automatically connected to the site) in the descending order is site IP setting, the site setting in the Common.cfg file, the site setting in importing a batch of devices.

When a device is in the IP range of a sub-site and a superior site, the device goes to the sub-site with priority.

When site A configured with both the public and the private IP and the site B configured with only the public IP are at the same level, the device goes to site A with priority.

You can enter 0.0.0.0 in the Public IP field, which means all IP addresses are acceptable.

Importing Sites

You can import a template to add multiple sites quickly. You need to download the template, edit the information in the template and then import the template to the device management platform.

Procedure

- 1. Click Site Management.
- 2. In the top-right corner, click Import.
- 3. Click Download the template.
- 4. Edit the template and save it to your computer.

Before editing the information, you need to read the note and then fill in the template as required.

5. Click Click to upload to import the file or drag the file to the specified field directly.

6. Click Upload.

Editing Sites

Procedure

- 1. Click Site Management.
- 2. Select a desired site in the Site Name list, and click Edit.

ite Management					🕀 Import	+ Add Site
Site Name/Description						
		* Site Name	zhangzhou			
Site Name	≡t ≡¥

▶ DongNan						
WUJI						
▶ 1						
		Site IP 🔞	Public IP	Private IP		
			0.0.0.0			

3. Set and save the parameters.

Edit Site			
*Site Name	zhangzhou		
*Parent Site	WULLLALA		~
Description	Maximum 1024 charac	ters.	
Site IP 🕜	+ Add		,
	Public IP	Private IP	Operation
	0.0.0/30		⊻ ⊗
	Save Canc	el	

Searching for Sites

Procedure

1. Click Site Management.

- 2. Enter the site name or the site description in the search box.
- **3.** Press **Enter** to perform a search. The search result is displayed in the Site Name list.

Deleting Sites

You can delete sites created on your own, but you cannot delete the default site named after your company name. If a site does not have any subordinate sites and the subordinate sites do not have devices, when you delete the site, its subordinate sites will be deleted too.

About this task

The site cannot be deleted if there are devices under it.

Procedure

- 1. Click Site Management.
- 2. Select a desired site in the Site Name list.
- 3. Click Delete.
- 4. Click OK according to the prompts.

Managing Accounts

You can manage different products on the device management platform. Different products may use different types of login accounts, so we divide the accounts into the SFB account, the SIP account, the YMS account, the Cloud account and the H.323 account for better management.

Note: This feature is not applicable to the Room System and the Teams phone.

Adding Accounts

=

- Importing Accounts
- Editing the Account Information
- Searching for Accounts
- Exporting Accounts
- Deleting Accounts

Adding Accounts

- 1. Click Account Management.
- In the top-right corner of the page, click Add Account > Add SFB account/Add SIP account/Add YMS account/Add CLOUD account/Add H.323 account.
- **3.** Configure the account information.
- 4. Click Save.

Importing Accounts

You can import the template to add multiple accounts quickly. You need to download the template, edit the information in the template and then import the template to the device management platform.

Procedure

- 1. Click Account Management.
- 2. In the top-right corner, click Import > Import SFB account/Import SIP account/Import YMS account/ Import CLOUD account/Import H.323 account.
- 3. Click Download the template.
- 4. Read the note, enter the corresponding information in the template and then save it to your computer.
- 5. Click Click to upload to import the file or drag the file to the specified field directly.
- 6. Click Upload.

Editing the Account Information

Procedure

- 1. Click Account Management.
- 2. Click 🗹 beside the desired account.
- 3. Edit the account information.
- 4. Click Save.

Searching for Accounts

Procedure

- 1. Click Account Management.
- 2. Enter the account information and click **Search**. The search result is displayed in the account list.

Exporting Accounts

You can export the basic information of all accounts. The exported files are classified by different account types.

Procedure

- 1. Click Account Management.
- 2. In the top-right corner, click Export.

The files are automatically saved to the local system, then you can view the basic information of all accounts.

 \times

Deleting Accounts

Procedure

- 1. Click Account Management.
- **2.** Select the desired accounts.
- 3. Click Delete and confirm the action.

If you select **Sign out the account from device when delete**, the account will be deleted from the device management platform and signed out from the device. If you select **Sign out the account from device when delete**, the account will only be deleted from the device management platform but not signed out from the device.

Are you sure to delete? The data cannot be restored if deleted.

Sign out the account from device when delete.

Managing the Device Configuration

After logging into the device management platform, you can manage the device configuration. In some situations, the device can automatically obtain the corresponding model configuration, MAC configuration, site configuration, or global parameters from the platform. The group configuration can only be updated manually. The priority of the configuration in ascending order is global, model, site, MAC.

If both the current site and the parent site have site configuration, the devices access both the configuration. The priority of the configuration in ascending order is the parent site, the current site.

If the following scenario occurs, the devices can automatically obtain the configuration:

- · When you connect the device to the platform for the first time
- When you reset the device (it is only applicable to devices in version 84 or later. For the detailed device version, contact Yealink technical support)
- Managing Model Configuration
- Managing the Site Configuration
- Managing the Group Configuration
- *Managing the MAC Configuration*
- Configuring Global Parameters
- Updating the Configuration

Managing Model Configuration

You can customize the configuration template according to the device model, that is, one template for one device model configuration. You can update the device configuration by setting the parameters in the template or editing the model configuration in the text.

- Adding Configuration Templates
- Setting Parameters
- Pushing Configuration to Devices
- Editing Configuration Templates
- Downloading the Model File
- Viewing Parameters
- Deleting Templates

Adding Configuration Templates

You can add configuration templates to manage the corresponding device models.

Procedure

- 1. Click Device Configuration > Model Configuration.
- 2. In the top-right corner, click Add Template.
- 3. Enter the template name, select the device model, and edit the description.
- 4. Click Save.

Setting Parameters

You can choose one of the following methods to configure the parameters:

- Edit parameters in the text: you can edit any parameter supported by the device in the text.
- Edit parameters on the graphical editing page: you can edit the corresponding template parameters on the graphical editing page.
- Setting Parameters in the Text
- Setting Parameters on the Graphical Editing Page

Setting Parameters in the Text

You can customize any parameters supported by the devices in the text and push the parameters to the device after editing.

- 1. Click Device Configuration > Model Configuration.
- 2. Click *** on the right side of the desired template, and select Edit Parameters in text from the dropdown menu.
- 3. Set and save the parameters.

Set Template Parameters T48S 1	Edit the parameter on the Graphical editing page.
You can edit template parameters in text, the format is: key=value, every parameter must be in different line static.lang.gui=Chinese_5 features.htline delay=8	. Here are the examples:
Inskey.Line=1 phone_setting_phone_lock/lock (ime_out=20 dm enterprise_id=leynbhige Inskeyn_Lippe=15 phone_setting_phone_lock.winokk pin=1234 features.dnd.emegency_enable=1 lang.wui -Chinese_T dm iste_id=Bay.Diple phone_setting_phone_lock.enable=1 features.dnd_mode=0 features.dnd_mode=0 features.key_tone=1	
2 Save Cancel	(s

4. On the pop-up window, select **Yes** to push the edited configuration immediately, or **No** to save the edited configuration.

 \times

5. Push the selected configuration.

- If you select **At once**, the configuration will be pushed to the selected devices immediately.
- If you select **Timing**, the configuration will be pushed to the selected devices at the time you set.
- If the edited templates are involved, the timer tasks will be executed according to the last template that you edit and save.

Pushing Configuration to Devices

You can push the configuration to devices if you have updated the configuration in the text or in the template.

- 1. Click Device Configuration > Model Configuration.
- 2. Click desired template.
- 3. Select the desired devices.
- 4. Click Push to Update.
- 5. Select a desired execution mode:
 - If you select **At once**, the parameters will be updated at once.
 - If you select **Timing**, configure the task name, the repeat type and the execution time, the firmware will be updated at a specific time.
- 6. Click OK.

Tip: You can also select the desired devices in the Device List, click Update Configuration File, select Update CFG by model template to update.

Editing Configuration Templates

You can edit the name and the description of the configuration templates, but you cannot edit the device model.

Procedure

- 1. Click Device Configuration > Model Configuration.
- 2. Click •••• beside the desired template.
- 3. Select Edit Template from the drop-down menu.
- **4.** Edit the template information.
- 5. Click Save.

Downloading the Model File

You can download the model file to your computer to view the updated configuration parameters of the corresponding model.

Procedure

- 1. Click Device Configuration > Model Configuration.
- 2. Click •••• beside the desired template.
- **3.** Select **Download config file** from the drop-down menu to download the configuration file to your local system.

Viewing Parameters

You can view the configured parameter in the template but the parameters you customize in the text are not displayed in the template.

×

Procedure

- 1. Click Device Configuration > Model Configuration.
- 2.
 - Click 🖾 beside the desired template.

View Parameters

test(SIP-T41S)		
Parameter	Catalog	Value
Server1 Transport Type	Account > Register > Account1	ТСР
	I know Edit	

You can click Edit to view the parameters in the template.

Deleting Templates

Procedure

- 1. Click Device Configuration > Model Configuration.
- 2. Select the desired templates.
- 3. Click Delete.
- 4. Click OK.

Managing the Site Configuration

You can customize and manage the configuration according to the site that the devices belong to. Site configuration applies to all the offline devices in the site and its sub-sites.

- Adding Site Configuration Templates
- Setting Parameters
- Pushing the Site Configuration to Devices
- Editing the Site Configuration Template
- Downloading the Site Configuration Template
- Deleting Site Configuration Templates

Adding Site Configuration Templates

Procedure

- 1. Click Device Configuration > Site Configuration > Add Template.
- 2. Set and save the parameters.

Site Configuration			+ Add Template
	٩	Search	
0 selected Delete			
Site Name	Description	1 Modification Time 🗢	Operation

Downloading the Site Configuration Template

You can download the site configuration to your computer to view the updated or edited configuration.

About this task

Procedure

- 1. Click Device Configuration > Site Configuration.
- Click ••• on the right side of the desired template, and select Download config file from the drop-down menu.

Deleting Site Configuration Templates

Procedure

- 1. Click Device Configuration > Site Configuration.
- 2. Select the desired templates.
- 3. Click Delete.
- 4. Click OK.
 - Note:

After you delete the template, the timer tasks involving this template will fail to execute.

Managing the Group Configuration

You can customize the group configuration for different departments of your company (for example marketing department and product department). When you push the configuration, online (registered or unregistered) devices are updated in real time when they receive updates.

- Adding Groups
- Setting Parameters
- Editing Groups
- Updating the Group Device
- Viewing Parameters
- Downloading Configuration File
- Deleting Groups

Adding Groups

You can add the name and description, select devices and customize the device setting for a group configuration.

Procedure

- 1. Click Device Configuration > Group Configuration.
- 2. In the top-right corner, click Add.
- 3. Enter the group name and the description.
- 4. Click Next step to go to the Group Device page.
- **5.** Select the desired devices.
- 6. Click Next step to go to the Set Parameters page.
- 7. Configure the desired parameters.
- 8. Click Save.

You can also click **Save and update** to push the updated parameters to all the devices in this group.

Setting Parameters

You can choose one of the following methods to configure the parameters:

- Edit parameters in the text: you can edit any parameter supported by the device in the text.
- Edit parameters on the graphical editing page: you can edit the corresponding template parameters on the graphical editing page.
- Setting Parameters in the Text
- Setting Parameters on the Graphical Editing Page

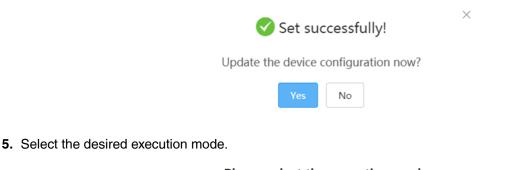

Setting Parameters in the Text

You can customize any parameters supported by the devices in the text and push the parameters to the device after editing.

- 1. Click Device Configuration > Group Configuration.
- 2. Click ••• on the right side of the desired template, and select Edit Parameters in text from the dropdown menu.
- 3. Set and save the parameters.

Set Template Parameters Test3	Edit the parameter on the Graphical editing page.
You can edit template parameters in text, the format is: key=value, every p	parameter must be in different line. Here are the examples:
static.lang.gui=Chinese_S	
features.hotline_delay=8	
lang.wui=Chinese,T phone_setting.inter_digit_time=4	
	Save Cancel

4. On the pop-up window, select **Yes** to push the edited configuration immediately, or **No** to save the edited configuration.

Please select the execution mode	×
Note: After update, device configuration will be overwritten	
Execution mode At once Timing	
OK Cancel	

Note:

- If you select **At once**, the configuration will be pushed to all the devices in this group immediately.
- If you select **Timing**, the configuration will be pushed to all the devices in this group at the time you set.
- If the edited templates are involved, the timer tasks will be executed according to the last template that you edit and save.

Setting Parameters on the Graphical Editing Page

You can edit the parameter supported in the template, and push the edited parameter to the device.

- 1. Click Device Configuration > Group Configuration.
- 2. Click 😳 beside the desired template.
- 3. Set and save the parameters.

- If you select **Timing**, the configuration will be pushed to all the devices in this group at the time you set.
- If the edited templates are involved, the timer tasks will be executed according to the last template that you edit and save.

Editing Groups

You can edit the name and the description, reselect the devices and reset the device parameters for the group.

Procedure

- 1. Click Device Configuration > Group Configuration.
- 2. Click *** beside the desired group.
- 3. Select Edit Group from the drop-down menu.
- 4. Edit the corresponding information.
- 5. Click Save.

Updating the Group Device

When you need to add or remove devices in your group, you can update the group device and choose to save the group configuration directly or push the parameters to all devices in your group immediately.

Procedure

- 1. Click Device Configuration > Group Configuration.
- 2. Click (1) beside the desired group.
- **3.** Select the desired devices.
- 4. Click Save.

You can click **Push to Update** to update the parameter configuration to all the devices in this group.

Viewing Parameters

You can view the configured parameter in the template but the parameters you customize in the text are not displayed in the template.

×

Procedure

- 1. Click Device Configuration > Group Configuration.
- 2. Click 🗟 beside the desired group.

View Parameters

1231		
Parameter	Catalog	Value
Server1 Retry Counts	Account > Register > Account1	4
	I know Edit	

You can click Edit to edit the parameters.

Downloading Configuration File

You can download the configuration file to your computer to view the updated configuration parameters of the corresponding group.

Procedure

- 1. Click Device Configuration > Group Configuration.
- 2. Click ••• beside the desired group.
- **3.** Select **Download config file** from the drop-down menu to download the configuration file to your local system.

Deleting Groups

Procedure

- 1. Click Device Configuration > Group Configuration.
- **2.** Select the desired group.
- 3. Click Delete.
- 4. Click OK according to the prompts.

Managing the MAC Configuration

You can upload, generate, download and export the configuration file, you can also push the backup files to devices.

- Uploading backup Files
- Generating Configuration Files
- Setting Parameters
- Pushing Backup Files to Devices
- Downloading Backup Files
- Exporting Backup Files
- Deleting Backup Files

Uploading backup Files

You can update the configuration for one or more devices by uploading the configuration file.

Procedure

- 1. Click Device Configuration > MAC Configuration.
- 2. In the top-right corner, click Upload backup file.
- 3. Click Select the file, then select the desired file from your computer.
- 4. Click Confirm.

Generating Configuration Files

You can generate configuration files to back up the configuration on the device management platform directly.

Procedure

1. Click Device Configuration > MAC Configuration.

- 2. In the top-right corner, click Generate config file.
- **3.** Select the desired devices.

4. Click Confirm.

If the device has already generated a configuration file, click **Replace** to generate a new configuration file.

Setting Parameters

You can choose one of the following methods to configure the parameters:

- Edit parameters in the text: you can edit any parameter supported by the device in the text.
- Edit parameters on the graphical editing page: you can edit the corresponding template parameters on the graphical editing page.
- Setting Parameters in the Text
- Setting Parameters on the Graphical Editing Page

Setting Parameters in the Text

You can customize any parameters supported by the devices in the text.

Procedure

1. Click Device Configuration > MAC Configuration.

- 2.
 - Click Beside the desired template.
- **3.** Set and save the parameters.

Set Template Parameters 001565f30702	Edit the parameter on the Graphical editing page. 🛅

👔 Tip:

- You can select the edited configuration, and push it to the desired devices.
- You can click **Reset** to reset the configuration on this page to the value before modification.

Pushing Backup Files to Devices

Procedure

- 1. Click Device Configuration > MAC Configuration.
- 2. Click 🖾 beside the desired MAC address.

Downloading Backup Files

You can download the backup files to your local system.

Procedure

1. Click Device Configuration > MAC Configuration.

2. Click 🖳 beside the desired MAC address to download the backup to your local system.

Exporting Backup Files

You can export the files of all devices.

Procedure

- 1. Click Device Configuration > MAC Configuration.
- 2. In the top-right corner, click Export.

Deleting Backup Files

- 1. Click Device Configuration > MAC Configuration.
- 2. Select the desired backup file.
- 3. Click Delete.

4. Click OK according to the prompts.

Configuring Global Parameters

The global parameter applies to all devices connected to the device management platform.

Procedure

- 1. Click Device Configuration > Global Parameters.
- 2. Configure the global parameters in the corresponding field.
- 3. Click Save.

You can also click Save and update, and click OK to update the global parameters to all devices.

Updating the Configuration

You can update the configuration by downloading the latest configuration file from Yealink official website. If the configuration is updated, the parameters in the template will be updated synchronously. You can download the latest configuration file from *http://support.yealink.com/documentFront/forwardToDocumentDetailPage?documentId=242*.

Procedure

- 1. Click Device Configuration > Configuration Update.
- 2. Click Select to upload the file.
 - Only the .xls file format is supported and the size should be no more than 2M.
- 3. Click Upload.

Managing Tasks

The Scheduled Task page displays the added timer tasks and allows you to add, view, or edit timer tasks on this page. The Executed Task page displays the executed tasks and allows you to view all the executed tasks, view the details of the failed execution, and retry the failed tasks.

Execution mode	 At once: the task is executed immediately. Timing: the task is executed at the time you set.
Tasks and Rules	 Update resource file: you can only push one file of the same resource type at a time. Only the resource file supported by the selected device can be pushed. Upgrade firmware: if you select devices of different models, only the firmware applicable to all the devices can be pushed. Update config file:
	 Update CFG by model template: the system will push the configuration of the corresponding model template to the selected device. If the corresponding model temple does not exist, no push is performed. Update CFG by factory defaults: the system will push the system default configuration to the selected device.

	• DND/Cancel DND: DND is enabled or disabled for the registered accounts you select on the selected device.
•	• Push global parameters: the system will push the global parameter to the selected devices.
4	 Send message: the system will send messages to the selected devices.
	 Reboot/Reset to factory: the system will reboot the selected devices or reset the selected devices to factory.
	• Upadate site configuration: the system will push the site configuration you select to the selected devices.
	 Upadate group configuration: the system will push the group configuration you select to the selected devices.
	 Push MAC config: the system will push the MAC configuration you select to the selected devices.

Monitoring Devices

You can view the call quality of the devices for QoE analysis and solve the problems by viewing the alarm.

- **Note:** The call quality and the device alarm are advanced features, not supported by the basic package. If you want to use the advanced features, you can *Trying Advanced Features* or contact your distributor/reseller to subscribe to the advanced package. You can view the details of the subscribed package on the page of *Managing Orders*.
- Viewing Call Quality Statistics
- Managing Alarms

Viewing Call Quality Statistics

You can view the call quality and the session distribution on the Call statistics page. You can also view the details of the call quality, including the user information, the basic device information and the call-related information.

- **Note:** Uploading the call statistics to the device management platform is not supported by the Teams phone, so you are not available to view the call quality of the Teams phone.
- Customizing the Indicators of Call Quality Detail
- Viewing the Call Data

Customizing the Indicators of Call Quality Detail

The device name, the model, the firmware, the caller/callee, the call type and the quality are displayed by default in the Call Quality Detail module, and you can customize 6 indicators except for the MAC address.

Procedure

- 1. Click Dashboard > Call Statistics.
- 2. Click More indicators.
- 3. Select the desired indicators.
- 4. Click Submit.

The selected indicators are shown in the list of call quality detail.

Call Quality Detail(2	018/12/19~2018/12/	19)					
Device/MAC/Accor	unt Information		Q More ∨				More Indicators •

Managing Alarms

When the devices are abnormal, they will send alarms to the platform so that you can detect and solve problems such as network or server problems in time. You can manage the alarm strategies and choose to view the alarm via email or on the management platform.

- Adding Alarm Strategies
- Editing Alarm Strategies
- Deleting Alarm Strategies
- Viewing Alarms
- Deleting Alarms

Adding Alarm Strategies

Procedure

1. Click Alarm Management > Alarm Strategy.

- 2. Click Add Strategy.
- 3. Enter the strategy name.
- 4. Select the desired alarm severity.
- 5. Click 🜻 to add the alarm receiver, and click OK.
- 6. Enable the alarm strategy.
- 7. Click Save.

Related concepts

Appendix: Alarm Types

Editing Alarm Strategies

Procedure

- 1. Click Alarm Management > Alarm Strategy.
- 2. Click 🗹 beside the desired alarm.
- 3. Edit the related information of the alarm strategy.
- 4. Click Save.

Deleting Alarm Strategies

Procedure

- 1. Click Alarm Management > Alarm Strategy.
- 2. Click **beside the desired alarm strategy**.
- 3. Click OK according to the prompts.

Viewing Alarms

When a problem occurs to the device, for example the call failure or the registration failure, the problem will be reported to the server. You can quickly locate the problem by viewing the alarm details. If you have configured to receive the alarm by email, you can view the alarm in the email.

Before you begin

The in-site alarm reminder is enabled, and the alarm recipient is the login account.

Procedure

- 1. Click Alarm Management > Alarm List.
- **2.** Click 0 beside the desired alarm.

You can view the alarm information, including the latest reporting time, the times and the detailed information.

Related concepts

Appendix: Alarm Types Managing Alarms

Deleting Alarms

Procedure

- 1. Click Alarm Management > Alarm List.
- 2. Select the desired alarm.
- 3. Click Delete.
- 4. Click OK according to the prompts.

Diagnosing Devices

You can troubleshoot the device by using the log files and the captured packet and so on. Make sure that the device is connected to the device management platform before being diagnosed. You can diagnose up to 5 SIP devices at the same time. This feature is not applicable to USB devices and Room System devices.

- Going to the Device Diagnostics Page
- Exporting the Packets, Logs, and Configuration Files by One Click
- Capturing Packets
- Diagnosing the Network
- Exporting Syslogs
- Exporting Backup Files
- Viewing the CPU and the Memory Status
- Viewing Recordings
- Capturing the Screenshot of the Device
- Setting the Log Level
- Setting the Device Logs

Going to the Device Diagnostics Page

You can diagnose devices via the **Device List** page (**Device Management > SIP Device List/USB Device List/Room System**) and the **Device Diagnostic** page.

- 1. The Device List page
 - Diagnosing a single device (taking the SIP device as an example)

MAC-0	01565f30702 Export Packetcapture file Success 📀	
Diagno	stics complete	
	Download Cancel	

5. Click **Download** to download the files to your local system.

Capturing Packets

- **1.** Going to the Device Diagnostics Page .
- 2. Click Packetcapture.
- 3. Select the desired Ethernet and type, and then enter the string.

- 4. Click Start to begin capturing the signal traffic.
- 5. Click Finish to stop capturing, and the file is generated automatically.
- Click Download to save the file to your computer.
 If it takes more than 1 hour to capture packets, the packet capturing will be automatically ended.

Diagnosing the Network

Network diagnostics include: Ping (ICMP Echo) and Trace Route. **Ping (ICMP Echo)**: by sending a data packet to the remote party and requesting the party to return a data packet in the same size, this method can identify whether those two devices are connected. The diagnostic results include a brief summary of the received packets, as well as the minimum, the maximum, and the average round trip times of the packets. **Trace Route**: this method records the route from the local device to the remote device. If this test succeeds, you can view the network node and the time took from one node to the other, to check whether or not there is a network congestion.

Procedure

- 1. Going to the Device Diagnostics Page.
- 2. Click Network detection in the Diagnostic Tools filed.
- 3. Select Ping (ICMP Echo) or Trace route.
- 4. Enter the IP address.
 - The IP address of the device management platform is default.
- 5. Select the desired value from the drop-down menu of Request times.
- 6. Click OK to start.

Exporting Syslogs

You can export the current syslogs to diagnose the device. It is not available for offline devices.

Procedure

- 1. Going to the Device Diagnostics Page.
- 2. Click Export System Log in the Diagnostic Tools filed.
- 3. Save the file to your local computer.

Exporting Backup Files

You can export the cfg files or the bin files. For cfg files, you can choose to export static setting files, nonstatic setting files or all setting files. You cannot export configuration files of the offline devices.

Procedure

- 1. Going to the Device Diagnostics Page.
- 2. Click Export Config File in the Diagnostic Tools filed.
- 3. Select the file type.

If you select cfg, you can choose to export static settings, non-static settings or all settings.

4. Click Export, and then save the file to your local computer.

Viewing the CPU and the Memory Status

The device will report its CPU and memory information to the device management platform at a regular time, so you can update the information and view the latest information. You can also view the memory information by copying it to Microsoft Word.

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click CPU Memory Status in the Diagnostic Tools filed.
- 3. Do one of the following:
 - Click CPU to view the CPU usage.
 - Click Memory to view the memory usage.

Viewing Recordings

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click Recording file.

You can select the **Automatic upload recording file** checkbox to enable the automatic uploading, so that the recording file will be uploaded to the platform automatically.

You can also click ڬ to download the recording.

Capturing the Screenshot of the Device

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click Screencapture.

You can click **Re-acquire** to acquire the latest screenshot.

Setting the Log Level

- **1.** Going to the Device Diagnostics Page .
- 2. Click Log Level.
- 3. Enter the desired value.
- 4. Click Confirm.

Setting the Device Logs

Note that this section is only available for the video conferencing system, version XX.32.0.35 or later (XX represents the fixed number of each device model). You can enable the Log Data Backup feature, and the device will send the system log to the device management platform. You can set the log level, view or download the current backup file. You can also set the module log, save the log to the local computer, export the log to the USB flash drive, upload the log to a log server, or put the log backup to a specified server.

- Setting the Module Log
- Setting the Local Log
- Setting the Syslog
- Putting the Log Backups to a Specified Server
- Enabling the Log Data Backup
- Downloading the Backup Log

Setting the Module Log

You can set the type of the module log and the log level for the device. The module log includes all, the driver, the system, the service, the connectivity, the audio & video, the protocol, the deploy, the web, the app and the talk.

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click Log Settings.
- 3. In the Module Log field, select the log type and the level.
- 4. Click Save.

Setting the Local Log

You can enable the Local Log feature, configure the local log level and the maximum size of the log file, and enable the USB Auto Exporting Syslog feature to export the local log to the USB flash drive connected to the device.

Before you begin

Note: The module log level is smaller than the local log level. For example, if you set the log level of the hardware driver as 6 and the local log level as 3, the exported log level of the hardware driver is 3.

- 1. Going to the Device Diagnostics Page.
- 2. Click Log Settings.
- 3. In the Local Log field, enable Local Log.
- 4. Enable USB Auto Exporting Syslog.
- 5. Select the local log level and the log file size.
- 6. Click Save.

Setting the Syslog

You can upload the log generated by the device to a log server.

Before you begin

Note: The module log level is smaller than the syslog level. For example, if you set the log level of the hardware driver as 6 and the syslog level as 3, the exported log level of the hardware driver is 3.

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click Log Settings.
- 3. In the Syslog field, enable Syslog.
- 4. Configure the syslog server and the port.
- 5. Select the syslog transport type and the syslog level.
- 6. Select the syslog facility, which is the application module that generates the log.
- 7. Enable Syslog Prepend MAC, and configure the MAC address come in the uploaded log file.
- 8. Click Save.

Putting the Log Backups to a Specified Server

You can make backups for the device log and put the backups to a specified server.

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click Log Settings.
- 3. In the Other Log Settings field, enable Log File Backup.
- 4. Enter the address, the user name and the password of the specified server.
- 5. Select the desired HTTP method and the POST mode.
- 6. Click Save.

Enabling the Log Data Backup

After you enable this feature, the device management platform will make a log backup every day, and only save the log generated in the past 7 days.

Procedure

- **1.** Going to the Device Diagnostics Page .
- 2. Click Log Settings.
- 3. In the Other Log Settings field, enable Log Data Backup.
- 4. Click Save.

Downloading the Backup Log

If you enable the Log Data Backup feature, you can download the log saved by the device management platform.

- **1.** Going to the Device Diagnostics Page .
- 2. On the right side of the corresponding log, click **Download Log**.

You can select multiple logs, and click Batch Download.

Configuring the SMTP Mailbox

The SMTP mailbox is used to send the alarm and the account information to administrators.

About this task

The SMTP mailbox is used to send the alarm and the account information to administrators.

The parameters for the SMTP mailbox setting are described below:

Parameter	Description		
SMTP	Specifies the address of the SMTP server.		
Sender	Configures the email address of the sender.		
Account	Specifies the email username of the sender.		
Password	Specifies the email password of the sender.		
Port	Specifies the connection port.		
This server requires a secure connection.	Enables or disables the secure connection: SSL or TLS (default)		
Enable the mailbox	Enables or disables the mailbox.		

- 1. Click System Management > Mailbox Settings.
- 2. Configure the parameters.

3. Optional: Click Test email settings.

	Test email settings		
* Receiver:	Please enter a receiver to test email settings		

Enter the email address of a receiver and click **Submit** to test whether the email address you set is available. If the receiver does not receive the email, you can check the account and the password.

4. Click Save.

Obtaining the Accesskey

The device management platform allows the third parties to call the API to integrate with their own system. Before calling the API, you need apply for the AccessKey. For more information, refer to *API for Yealink Device Management Platform*.

Procedure

- 1. Click System Management > AccessKey.
- 2. If you want to call the interface of the alarm and the device diagnosis, enter the callback address.
- 3. Click Acquire, and then AccessKey ID and the AccessKey Secret will be generated by automatically.

Uploading DST Rules

Procedure

- 1. Click System Management > DST Template.
- 2. Click Select and select the desired file to upload.

DST Template	
Current Version : 0.0.6	Last upload : 2020/01/19 20:08:14
Please select the file to upload Select Upload Only .zip file format is supportted, maximum size is 2M. The file shoud contain two file, the Chinese file should rename as xx_version_CN.xml and the english file dst.zip	e is xc_version_EN.xml

3. Click Upload.

Managing Administrator Accounts

This chapter allows the administrator to view, add, edit sub-administrator accounts, and manage role privileges. The administrator also can edit his account information. By default, the administrator has all privileges and can assign different role privileges for sub-administrator accounts.

• Changing the Login Password

- Editing the Information of the Administrator Account
- Viewing the Account Code
- Managing Sub-Administrator Accounts

Changing the Login Password

To ensure the account security, we recommended that you change the password regularly.

Procedure

- 1. Hover your mouse over the account avatar in the top-right corner of the page, and then click **Account Settings**.
- 2. Click Edit beside the password.
- 3. Enter the current password and enter the new password twice.
- 4. Click Confirm.

Editing the Information of the Administrator Account

You can edit the information, for example the contact, the phone number and the country, so that the superior distributor or reseller can contact you. The administrator mailbox is used to receive the alarm and the account information.

Procedure

- 1. Hover your mouse over the account avatar in the top-right corner of the page, and then click **Account Settings**.
- 2. Edit the administrator account in the corresponding field.
- 3. Click Save.

Viewing the Account Code

The account code is the site ID. You can put the account code into the Common.cfg file and push the file to the device, to make the device automatically connected to the corresponding site of YDMP. For more information, refer to *Configuring the Common.cfg File*.

- 1. Hover your mouse over the account avatar in the top-right corner of the page, and then click **Account Settings**.
- 2. Click Account Code.

Managing Sub-Administrator Accounts

You can add sub-administrator accounts, and assign different data permissions or function permissions to different sub-administrator accounts.

- Adding/Editing/Deleting a Group
- Adding/Editing/Deleting a Role
- Assigning Roles to Sub-Administrator Accounts
- Assigning the Function Permission
- Assigning the Data Permission
- Adding and Managing Sub-Administrator Accounts

Adding/Editing/Deleting a Group

You can manage the roles by the group.

About this task

You cannot edit or delete the default group.

Procedure

1. Click System Management > Role Management.

- 2. In the top-right corner, click Add Group.
- 3. Enter the group name.

4. Click OK.

After adding the group, click the edit icon or the delete icon on the right side to edit or delete the group.

Role Management				+ Add Group + Add Role
Role Name		Sub Account Function Permission	n Data Permission	
 default role group 		Contact/Register Email	Q Search	Add sub account
▶ group-1		Contact	Register Email	Operation
▼ group-2	$\square \Theta$			

Adding/Editing/Deleting a Role

You can customize roles first, configure the corresponding function permission for the roles, and then assign roles to the sub-administrator accounts.

About this task

The default roles are as below, you cannot edit or delete them.

Table 1: Default role

Name	Department	Function and data permission
Super manager	Default role group	All function and data permission
Empty manager	Default role group	Only the login permission

- 1. Click System Management > Role Management.
- 2. In the top-right corner, click Add Role.

- 3. Specify the role name.
- 4. Select a desired group.
- 5. Click OK.

After adding the role, click the edit icon or the delete icon on the right side to edit or delete the role.

Assigning Roles to Sub-Administrator Accounts

After adding the roles, you can add sub-administrator accounts for them. You can also assign roles to subadministrator accounts when adding the sub-administrator accounts (for more information, see *Adding and Managing Sub-Administrator Accounts*).

Before you begin

You have added roles.

Procedure

- 1. Go to Role Management, select the corresponding role, and click Add sub account.
- 2. Configure the phone number and the email.
- 3. Click Confirm.

Related tasks

Adding/Editing/Deleting a Role

Assigning the Function Permission

If you want to allow non-managers to use the sub-administrator account, for example, checking the call quality of the phone and diagnosing the devices, but you do not want them to add or delete devices, you can assign the limited function permission to them.

Before you begin

You have added roles.

- 1. Go to Role Management, select the corresponding role, and click Function Permission.
- 2. If you only want to grant the Readonly permission, select the check boxes of **Readonly** on the right side of the corresponding functions; if you want to grant the operation permission, select the check boxes of the corresponding operations.

Troubleshooting

This chapter provides you with general information for troubleshooting some common problems while using the Yealink device management platform. Upon encountering a case not listed in this section, contact your Yealink reseller or technical support engineer for further support.

- Forgetting the Login Password
- Why You Cannot Access the Login Page?
- Why the Browser Prompts That the Security Certificate of the Website Is not Trusted When You Access the Login Page of YDMP?

Forgetting the Login Password

If you forget the password, you can reset it via email.

Procedure

- 1. On the Login page of the device management platform, click Forget Password.
- 2. Enter your email and the captcha in the corresponding field.
- 3. Click OK.
- 4. Click OK according to the prompts.
- 5. After you receive the email for resetting the password, click the resetting link in 10 minutes to reset the password.

Why You Cannot Access the Login Page?

Server:

- · Check the network connection of the devices.
- Check your server and the firewall.

Windows:

Run Network Diagnostics of Window.

Check your server and the firewall.

1. Log into CentOS as the root user and open the terminal:

2. Run the command:

```
    systemctl status firewalld
```

- If the firewall is active, you should run the following commands to enable the related ports in the firewall configuration:
- firewall-cmd --permanent --zone=public --add-port=80/tcp
- firewall-cmd --permanent --zone=public --add-port=443/tcp
- firewall-cmd --permanent --zone=public --add-port=9989/tcp
- firewall-cmd --permanent --zone=public --add-port=9090/tcp
- firewall-cmd --reload
- firewall-cmd --list-ports
- After you finish the configuration, refresh the login page, you can access the login page successfully.

Why the Browser Prompts That the Security Certificate of the Website Is not Trusted When You Access the Login Page of YDMP?

- The Yealink server has built-in certificates. For security considerations, the browser only trusts certificates issued by the professional certificate issuing authorities. Therefore, they do not trust selfsigned certificates by default.
- 2. When you access the Login page for the first time, it will prompt you an insecure connection (certificate security issue), but you can still access the browser.
- 3. If you have purchased your own certificate, you can also replace our certificate with your own certificate.
- 4. In the following, "serverdm" is the certificate file name you want to replace.

Solution:

- 1. Open the terminal and enter the directory where you put the certificate file.
- 2. Generate dm.12 file, run the command:

openssl pkcs12 -export -in serverdm.crt -inkey dm.key -out serverdm.p12 -name serverdm

It will prompt you to enter and verify the export password. You need to remember this password.

3. Generate Keystore file (jks file), run the command:

keytool -importkeystore -srckeystore serverdm.p12 -srcstoretype PKCS12 -destkeystore serverdm.jks

It will prompt you to enter the target key, and then enter the export password you set in step 2. Note that the target key should be the same as the key you set in step 2.

- 4. Replace /usr/local/yealink/dm/tomcat_dm/dm.jks with the serverdm.jsk.
- 5. Change the keystore password you set at the path of /usr/loca/yealink/dm/tomcat_dm/conf/server.xml.

Suppose that 654321 is your keystore password.

Reboot the server and the certificate will take effect.

Appendix: Alarm Types

Alarm type	Severity
Poor call quality	Critical
Register failure	Critical
Upgrade firmware failure	Critical
Update configuration failure	Critical
Application crash	Critical
Application no response	Critical
Kernel panic	Critical
Offline	Critical
System license is about to expire	Critical
Device capacity of license is insufficient	Critical
Subset Offline	Critical
Low power	Critical
Power off or Disconnect	Critical
Visual voicemail retrieve failure	Minor
Hold failure	Minor
Resume failure	Minor
Play visual voicemail failure	Minor
RTP violate	Minor
RTP address change	Minor
RTP dead	Minor
SRTP failure	Minor
RTP SSRC change	Minor
Calendar synchronization failure	Minor
Call log retrieve failure	Minor
Outlook contact retrieve failure	Minor

Alarm type	Severity
Call failed	Minor
Bluetooth paired failed	Major
BToE pairing failure	Major
Exchange discovery failure	Major
Exit program	Major
DNS server discovery failure	Major
Time synchronization failure	Major
Meet now failure	Major
Online	Major
