

User Access Level of Web/Phone User Interface

Overview

User access level feature is used to achieve different access levels for different authorized users. It is useful for protecting the IP phone from unauthorized configuration, and popularly used for the Hosted PBX solution. The following describes how to customize the access permission for configurations on the web user interface and phone user interface.

Scenario

For a Hosted PBX solution, IP phones are provided to customers for free but required a minimum consumption monthly. All PBX services associated features on the deployed IP phones are preconfigured to avoid customers from using other Hosted PBX's service, and the Hosted PBX system administrator can restrict the user access permission using user access level feature. For example, the Hosted PBX system administrator restricts the write permission of the account associated configurations. This means customers can only read these configurations on both web user interface and phone user interface.

Introduction

Yealink SIP-T48G, SIP-T46G, SIP-T42G, SIP-T41P, SIP-T29G, SIP-T27P, SIP-T23P/G, SIP-T21(P) E2 and SIP-T19(P) E2 IP phones support access levels of admin, var and user. The following describes the detailed information of each access level:

- **Admin:** The administrator access level. With this access level, all configurations on both web user interface and phone user interface can be read and written. The authentication identity for this access level is **admin**. And the default password is **admin**.
- **Var:** The value-added reseller access level. Generally, with this access level, most configurations on the web user interface and phone user interface can be read and written. The authentication identity for this access level is **var**. And the default password is **var**.
- **User:** The end user access level. Generally, only a few configurations are allowed to be written and read for access user. The authentication identity for this access level is **user**. And the default password is **user**.

Specification

Access permissions of all configuration items available on Yealink SIP-T48G/T46G/T42G/T41P/T29G/T27P/T23P/T23G/T21(P) E2/T19(P) E2 IP phones' web user interface and phone user interface can be defined in a fixed WebItemsLevel.cfg file. Each configuration item in the file is formatted as:

ItemName = X₁X₂

The valid values of X₁, X₂ include 0, 1, 2 and 3.

X₁ is used for specifying the access level. The access levels: 2 = admin, 1 = var, 0 = user, 3 = none.

X₂ is used for defining the access permission. 2 means the configuration item is read-only for X₁ and higher access levels, the highest is always writable. 1 means the configuration item is read-only for X₁ access level, and writable for higher access levels. 0 means the configuration item is writable for X₁ and higher access levels. 3 means the configuration item is read-only for X₁ and higher access levels.

If X₂ does not exist, the configuration item is visible for X₁ and higher access levels.

The following table lists the possible values of X₁X₂:

Value of X ₁ X ₂	Description
0	This configuration item is visible for admin, var and user access levels.
1	This configuration item is visible for admin and var access levels.
2	This configuration item is visible for admin access level only.
3	This configuration item is hidden for admin, var and user access levels.
00	This configuration item is writable for admin, var and user access levels.
01	This configuration item is read-only for user access level, writable for admin and var access levels.
02	This configuration item is read-only for var and user access levels, writable for admin access level.
03	This configuration item is read-only for admin, var and user access level.
10	This configuration item is writable for admin and var access levels, hidden for user access level.
11/12	This configuration item is read-only for var access level,

Value of X ₁ X ₂	Description
	writable for admin access level, hidden for user access level.
13	This configuration item is read-only for var and admin access level, hidden for user access level.
20/21/22	This configuration item is writable for admin access level, hidden for var and user access levels.
23	This configuration item is read-only for admin access level, hidden for var and user access levels.
30/31/32/33	This configuration item is hidden for admin, var and user access levels.

Application

This section will introduce procedures to configure access permission of the web user interface in detail. The flow chart of configuring user access level is shown as below:

Customizing WebItemsLevel.cfg

You can ask Yealink Field Application Engineer for the template file "WebItemsLevel.cfg", or you can download it online:
<http://support.yealink.com/documentFront/forwardToDocumentFrontDisplayPage>.

We recommend you only edit the desired configuration items in the supplied "WebItemsLevel.cfg" file, and keep other configuration items constant.

WebItemsLevel.cfg downloaded via auto provisioning will override that in the phone flash. Access level of any configuration item missed (including configuration value left blank) in the downloaded WebItemsLevel.cfg file will be changed to user by default.

The following shows configuration segments for the web user interface in the WebItemsLevel.cfg file for reference:

Sample 1: Configuration items in the WebItemsLevel.cfg for navigation bar settings of the Features page:

```
[ Features ]  
features-forward = 0  
features-general = 0  
features-audio = 0  
features-intercom = 0  
features-transfer = 1  
features-callpickup = 0  
features-remote = 2  
features-phonelock = 0  
features-acd = 0  
features-sms = 2  
features-actionurl = 1  
features-bluetooth = 0  
features-poweredled = 2  
features-notifypop = 0
```

According to the above configuration of access level, when logging in the web user interface with user access level, the web user interface displays as below:

Forward [?](#)

- Forward Emergency: Disabled
- Forward Authorized Numbers:
- Mode: Phone Custom [?](#)
- Account:
- Always Forward:
 - Target:
 - On Code:
 - Off Code:
- Busy Forward:
 - Target:
 - On Code:
 - Off Code:
- No Answer Forward:
 - After Ring Time(0~120s): 12
 - Target:
 - On Code:
 - Off Code:

DND [?](#)

- DND Emergency: Disabled
- DND Authorized Numbers:
- Mode: Phone Custom [?](#)
- Account:
- DND Status:
 - On Off [?](#)
- DND On Code:
- DND Off Code:

NOTE

Call Forward
It allows users to redirect an incoming call to a third party.

Call Forward Mode
Phone: Call forward feature is effective for the IP phone.
Custom: Call forward feature can be configured for each or all accounts.

Do Not Disturb (DND)
It allows IP phones to ignore incoming calls.

DND Mode
Phone: DND feature is effective for the IP phone.
Custom: DND feature can be configured for each or all accounts.

[? You can click here to get more guides.](#)

When logging in the web user interface with var access level, the web user interface displays as below:

The screenshot shows the Yealink T46G web configuration interface. The top navigation bar includes links for Log Out, Status, Account, Network, DSSKey, Features (which is the active tab), Settings, Directory, and Security. The main content area is titled "Forward&DND".

Forward

- Forward Emergency: Disabled
- Forward Authorized Numbers: [Input Field]
- Mode: Phone (radio button selected)
- Account: [Input Field]
- Always Forward

 - Target: [Input Field]
 - On Code: [Input Field]
 - Off Code: [Input Field]
 - Busy Forward

 - Target: [Input Field]
 - On Code: [Input Field]
 - Off Code: [Input Field]

No Answer Forward

- After Ring Time(0~120s): 12
- Target: [Input Field]
- On Code: [Input Field]
- Off Code: [Input Field]

DND

- DND Emergency: Disabled
- DND Authorized Numbers: [Input Field]
- Mode: Phone (radio button selected)
- Account: [Input Field]
- DND Status

 - On: On (radio button selected)
 - Off: Off (radio button selected)

NOTE

Call Forward
It allows users to redirect an incoming call to a third party.

Call Forward Mode
Phone: Call forward feature is effective for the IP phone.
Custom: Call forward feature can be configured for each or all accounts.

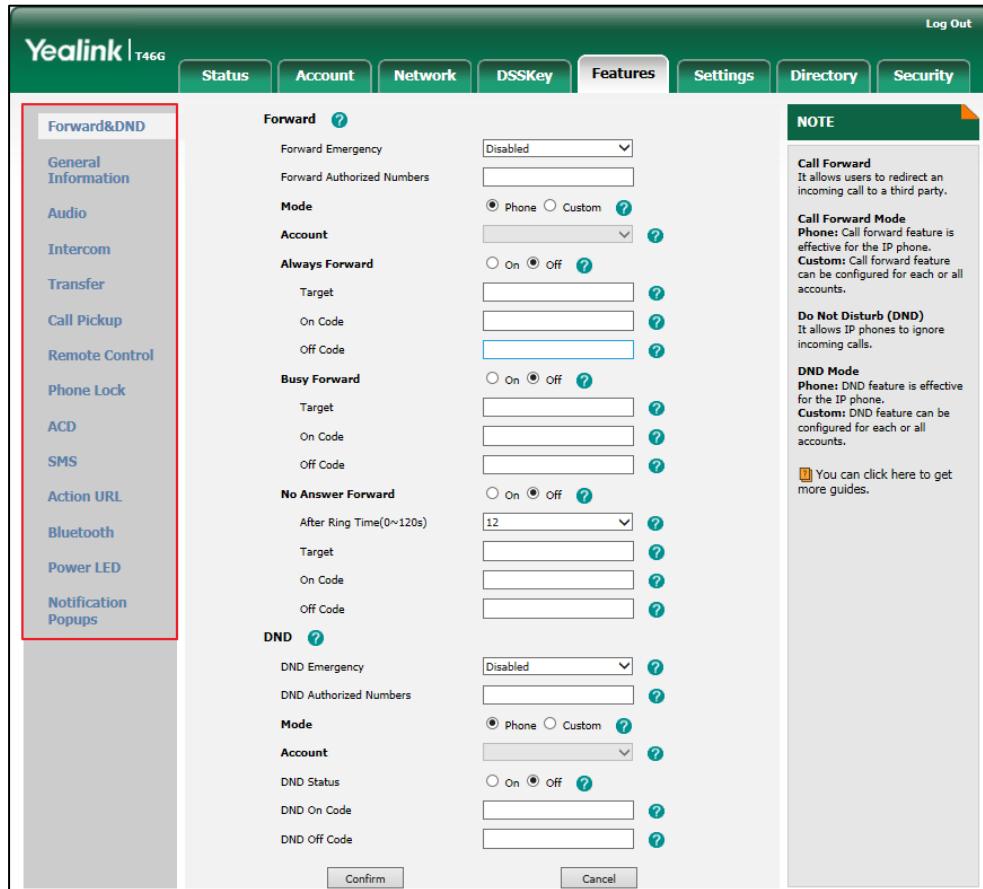

Do Not Disturb (DND)
It allows IP phones to ignore incoming calls.

DND Mode
Phone: DND feature is effective for the IP phone.
Custom: DND feature can be configured for each or all accounts.

Note: You can click here to get more guides.

Buttons at the bottom: Confirm and Cancel.

When logging in the web user interface with admin access level, the web user interface displays as below:

**NOTE**

Call Forward
It allows users to redirect an incoming call to a third party.

Call Forward Mode
Phone: Call forward feature is effective for the IP phone.
Custom: Call forward feature can be configured for each or all accounts.

Do Not Disturb (DND)
It allows IP phones to ignore incoming calls.

DND Mode
Phone: DND feature is effective for the IP phone.
Custom: DND feature can be configured for each or all accounts.

You can click here to get more guides.

Note: Configuration items for navigation bar are not writable on both web user interface and phone user interface. So, configuration items for navigation bar can be configured only using the format “**ItemName = X**”.

If the access permission of the first navigation configuration item for each main page is restricted, the access to the main web page will be denied.

The following table lists the first navigation configuration items for each main page:

Main Page	First Navigation Item	Configuration Item
Account	Register	account-register
Network	Basic	network-basic
DSSKey	Line Key 1-11 (for SIP-T48G), Line Key 1-9 (for SIP-T46G/T29G), Line Key 1-7 (for SIP-T27P), Line Key 1-5 (for SIP-T42G/T41P), Line Key (for SIP-T23P/T23G), Line Key (for SIP-T21(P) E2), Programable key (for SIP-T19(P))	linekey

Main Page	First Navigation Item	Configuration Item
	E2)	
Features	Forward&DND	features-forward
Settings	Preference	settings-preference
Directory	Local Directory	contacts-basic
Security	Password	password

For example, set the value of the configuration item “settings-preference” to be 1.

When logging into with user access level, the access to the Settings web page will be denied.

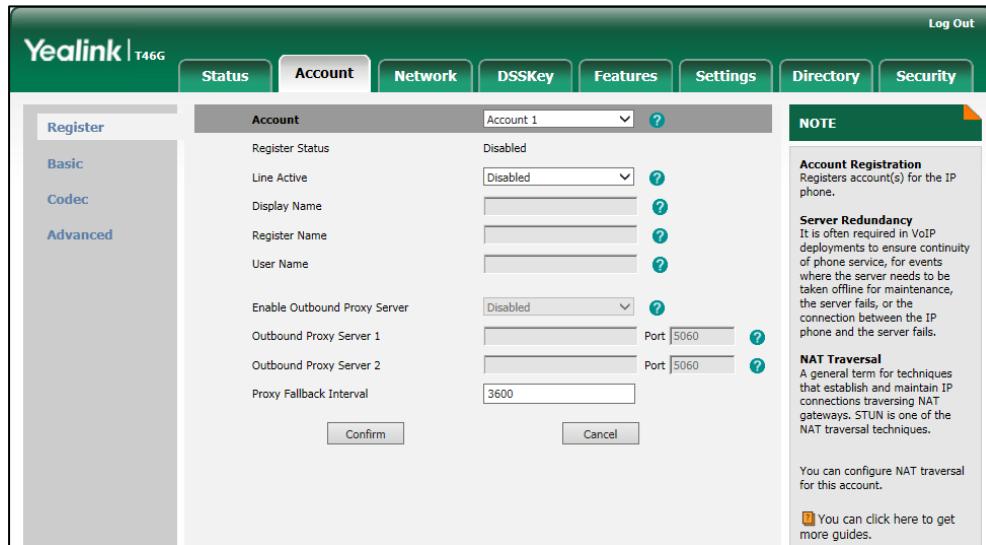

Sample2: Configuration items in the WebItemsLevel.cfg for the Register settings of Account page:

```
[ Account-Register ]
switch-account = 0
account_status = 0
line_active = 0
account_label = 11
display_name = 01
register_name = 03
user_name = 01
account_password = 12
enabled-outbound-proxy-server = 01
outbound-proxy-server = 01
backup-outbound-proxy-server = 01
transport-item = 11
NAT_traversal = 12
```

sip_server = 2

According to the above configuration of access level, when logging in the web user interface with user access level, the web user interface displays as below:

When logging in the web user interface with var access level, the web user interface displays as below:

When logging in the web user interface with admin access level, the web user interface displays as below:

For more information on parameters of the WebItemsLevel.cfg file, refer to [Appendix-A: Configuration Parameters](#) on page 20.

The following shows configuration segments for the phone user interface in the WebItemsLevel.cfg file for reference:

If you set the access permission of the high level, it will have an impact on that of the low level. In the following examples, the call forward menu has a higher level than always forward/busy forward/no answer forward submenu.

Example1: Configuration items in the WebItemsLevel.cfg for call forward menu and its submenu settings:

```
[ GUI ]
callcontrol_forward = 02
always-forward = 10
busy-forward = 00
NoAnswer-forward = 00
```

Note: The configuration of busy forward is the same as the one of the no answer forward, so the following figures take busy forward as an example.

According to the above configuration of access level, when logging in to the phone user interface with user access level, the access permission of each submenu is displayed as below:

Always forward submenu is hidden for user access level:

Busy forward/no answer forward submenu is read-only for user access level:

When logging in to the phone user interface with var access level, the access permission of each submenu is displayed as below:

Always forward submenu is read-only for var access level:

Busy forward/no answer forward submenu is read-only for var access level:

When logging in to the phone user interface with admin access level, the phone user interface displays as below:

Always forward submenu is writable for admin access level:

Busy forward/no answer forward submenu is writable for admin access level:

Example2: Configuration items in the WebItemsLevel.cfg for call forward menu and its submenu settings:

```
[ GUI ]
callcontrol_forward = 00
always-forward = 01
busy-forward = 02
NoAnswer-forward = 00
```

According to the above configuration of access level, when logging in to the phone user interface with user access level, the access permission of each submenu is displayed as below:

Always forward submenu is read-only for user access level:

Busy forward submenu is read-only for user access level:

No answer forward submenu is writable for user access level:

When logging in to the phone user interface with var access level, the access permission of each submenu is displayed as below:

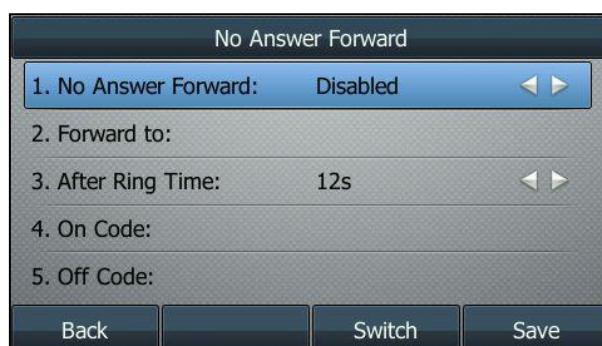

Always forward submenu is writable for var access level:

Busy forward submenu is read-only for var access level:

No answer forward submenu is writable for var access level:

When logging in to the phone user interface with admin access level, the phone user interface displays as below:

Always forward submenu is writable for admin access level:

Busy forward submenu is writable for admin access level:

No answer forward submenu is writable for admin access level:

For more information on parameters of the WebItemsLevel.cfg file, refer to [Appendix-A: Configuration Parameters](#) on page 20.

Configuring Yealink IP Phones

User access level feature is disabled for Yealink SIP-T48G/T46G/T42G/T41P/T29G/T27P/T23P/T23G/T21(P) E2/T19(P) E2 IP phones in neutral firmware version by default. Before using this feature, you need to enable it through auto provisioning introduced as following. User access level feature is configurable only via configuration files.

To configure user access level feature for Yealink IP phones:

1. Edit the following parameters in the configuration file (e.g., y000000000028.cfg).

Parameters	Permitted Values	Default
security.var_enable	0 or 1	0
Description:		
This parameter is used to enable or disable the login of the web/phone user interface with different access levels.		
0-Disabled 1-Enabled		
Note: It takes effect after reboot.		
Web User Interface:		
None		
Phone User Interface:		
None		
security.default_access_level	0, 1 or 2	0
Description:		
This parameter is used to configure the default access level to access the phone user interface.		
0-user 1-var 2-admin		
Note: It works only if the value of the parameter "security.var_enable" is set to 1 (Enabled). It takes effect after reboot.		
Web User Interface:		
None		
Phone User Interface:		
None		
web_item_level.url	FTP, TFTP, HTTP or HTTPS download URL	Blank

Parameters	Permitted Values	Default
<p>Description: This parameter is used to configure the access URL of the WebItemsLevel.cfg file.</p> <p>Note: It takes effect after reboot.</p> <p>Web User Interface: None</p> <p>Phone User Interface: None</p>		

The parameter settings in the configuration file for reference are shown as below:

```
security.var_enable =1
web_item_level.url = ftp://192.168.1.100/download/WebItemslevel.cfg
security.default_access_level = 1
```

2. Upload the configuration file to the directory of the provisioning server.
3. Configure the access URL of the provisioning server for the IP phone.
4. Trigger the IP phone to perform auto provisioning.

For more information on auto provisioning Yealink IP phones, refer to [Yealink_SIP-T2 Series_T19\(P\) E2_T4 Series_IP_Phones_Auto_Provisioning_Guide](#).

When the user access level is enabled, you can login the web/phone user interface with different access levels.

To login the web user interface with different access levels:

1. Press the **OK/V** key when the phone is idle to obtain the IP address.
2. Enter the IP address (e.g., http://192.168.0.10 or 192.168.0.10) in the address bar of web browser on your PC and then press the **Enter** key.
3. Enter the user name (admin/var/user) and password (admin/var/user) in the login page.
4. Click **Confirm** to login.

When logging in with different access levels, you can see different permissions of web user interface.

To login the phone user interface with different access levels:

1. Press **Menu->UserMode**.
2. Press  or  , or the **Switch** soft key to select the desired access level in the **User Type** field.

3. Enter the password in the **Password** field.

4. Press the **Save** soft key to accept the change.

You can see different permissions of phone user interface when logging in with different access levels.

Appendix-A : Configuration Parameters

Configuration Parameters of Web User Interface

The following table lists configuration items in the WebItemslevel.cfg file with associated configurations on the web user interface (take SIP-T46G IP phones as an example for reference):

Section Header	Parameters and Default Value	Configuration Items on the Web User Interface
[Status-Menu]	Status-Basic = 0	Status->Status (the whole page)
	Status-RTP = 0	Status->RTP Status (the whole page)
[Status]	version = 0	Status->Version 
	network = 0	Status->Network 
	IPv4 = 0	Status->IPv4 
	IPv6 = 0	Status->IPv6 
	NetworkCommon = 0	Status->Network Common

Section Header	Parameters and Default Value	Configuration Items on the Web User Interface
		Network Common  MAC Address 001565456e47 Link Status Connected Device Type Bridge
	AccountStatus = 0	Status->Account Status Account Status  Account1 1010@10.2.1.199 : Registered Account2 Disabled Account3 Disabled Account4 Disabled Account5 Disabled Account6 Disabled
	Ext = 0 (only applicable to SIP-T48G/T46G/T29G/T27P IP phones)	Status->Ext For SIP-T29G and SIP-T27P: Ext  EXP38 1 Hardware Version 16.0.0.0 EXP38 1 Firmware Version 5.17.0.0
